

PRODUCTION AND DELIVERIES OF ENERGY PRODUCTS, FEBRUARY 2013^{1,2} (PRELIMINARY DATA)

Production of energy products

In February 2013 compared to January 2013 a decrease is reported for the production of:

- solid fuels - by 21.7% to 2 525 thousand tonnes;
- unleaded motor gasoline - by 5.0% to 133 thousand tonnes;
- transport diesel - by 2.5% to 156 thousand tonnes;
- natural gas - by 12.0% to 22 million standard cubic metres;
- electricity - by 15.5% to 3 856 GWh.

No change is reported for the production of liquefied petroleum gases (Annex, Table 1).

In February 2013 compared to February 2012³ a decrease is reported for the production of:

- solid fuels - by 24.9%;
- electricity - by 17.0%.

Deliveries of energy products

In February 2013 compared to January 2013 an increase is reported for the deliveries of:

- liquefied petroleum gases - by 12.0% to 28 thousand tonnes;
- unleaded motor gasoline - by 90.5% to 40 thousand tonnes;

A decrease is reported for the deliveries of:

- solid fuels - by 23.0% to 2 629 thousand tonnes;
- transport diesel - by 7.1% to 91 thousand tonnes;
- natural gas - by 13.8% to 324 million standard cubic metres;
- electricity - by 12.4% to 3 162 GWh (Annex, Table 2).

¹The survey on energy products is conducted every month in accordance with the Regulation of the European Parliament and of the Council on energy statistics. The survey aims to submit information on the production and inland deliveries of the main energy products – electricity, solid fuels, natural gas and petroleum products. The reporting units are producers, importers and exporters of energy products. Production and deliveries of the energy products are the main observed indicators.

²Data series can be found on: www.nsi.bg, section Energy/Table data and Graphs/ Latest data.

³Data on the production of petroleum products in February 2013 are not comparable with data for the same period of previous year, because of planned annual repair of production capacities in refineries in February 2012.

In February 2013 compared to February 2012 an increase is reported for the deliveries of:

- liquefied petroleum gases - by 33.3%;
- unleaded motor gasoline - by 5.3%.

A decrease is reported for the deliveries of:

- solid fuels - by 27.3%;
- transport diesel - by 19.5%;
- natural gas - by 18.4%;
- electricity - by 15.1%.

Methodological notes

Solid fuels

Production – Include Hard coal, Lignite and Solid fuels from coal. Producers report quantities, calculated after any operation for removal of inert matter.

Deliveries – quantities delivered to the internal market. Equal to the total of the deliveries to the different types of consumers: producers' own use, main activity power stations, coking plants and patent fuel plants, industry, iron and steel industry and others.

Petroleum products

Production – include production of finished products at a refinery or blending plant.

Deliveries – the observed delivery of finished petroleum products from primary sources.

Deliveries of petroleum products are defined as: primary product receipts + gross refinery output + recycled products – refinery fuel + imports – exports – international marine bunkers + interproduct transfers – products transferred – stock changes.

Natural gas

Production – include all dry marketable production within national boundaries including offshore production. Production is measured after purification and extraction of NGLs and sulphur.

Deliveries – total natural gas, distributed for the internal market, including own use and losses.

This is defined as: *Indigenous production + Imports – Exports – Stock change.*

Data are presented in million standard cubic metres – at international standard conditions 15° C and 760 mm Hg.

Electricity

Production – include produced electricity from Thermal power plants, Nuclear power plant, Hydro power plants, Pumped storage plant and electricity, obtained from wind generators and solar panels.

Deliveries – sum of net produced electricity and net import.
