

## Industrial Production Indices in May 2012<sup>1</sup>

The preliminary data showed that the Industrial Production Index<sup>2</sup>, seasonally adjusted<sup>3</sup>, increased by 0.9% in May 2012 as compared to April 2012.

In May 2012 working day adjusted<sup>4</sup> Industrial Production Index rose by 0.9% as compared to the same month of 2011.

**Figure 1. Industrial Production Indices  
(2005=100)**

<sup>1</sup>May 2012 data are preliminary.

<sup>2</sup> Monthly Industrial Production and Industrial turnover indices measure changes in **production and turnover values** of industrial enterprises. This information can be used to assess the current economic development and for short-term forecasts. Indices do not measure the actual production level, it aims to measure the average change in value of production between two points of time

Indices are compiled on the base of information collected through representative sampling survey on industrial enterprises. The sample covers enterprises with annual turnover more than 97% of total turnover in industry.

Industrial production indices are calculated at constant base year (2005) that is to say they are weighted with the structure of the value added at factor costs in the base year.

<sup>3</sup> **Seasonal adjustment** is a statistical method, which eliminates the seasonal component of time series and it is particularly suitable for long-term comparisons and analysis of the data.

<sup>4</sup> **Working day adjustment** is an adjustment for variations caused by calendar effects, different number of calendar and working days in the months, national holidays and outliers (for example the presence of more non-working days in May could contribute to the decline in the production in some activities).

The seasonally and working day adjusted data on Industrial production index by months, starting from January 2000 can be found in NSI internet web-site: (<http://www.nsi.bg/otrasalen.php?otr=46>).

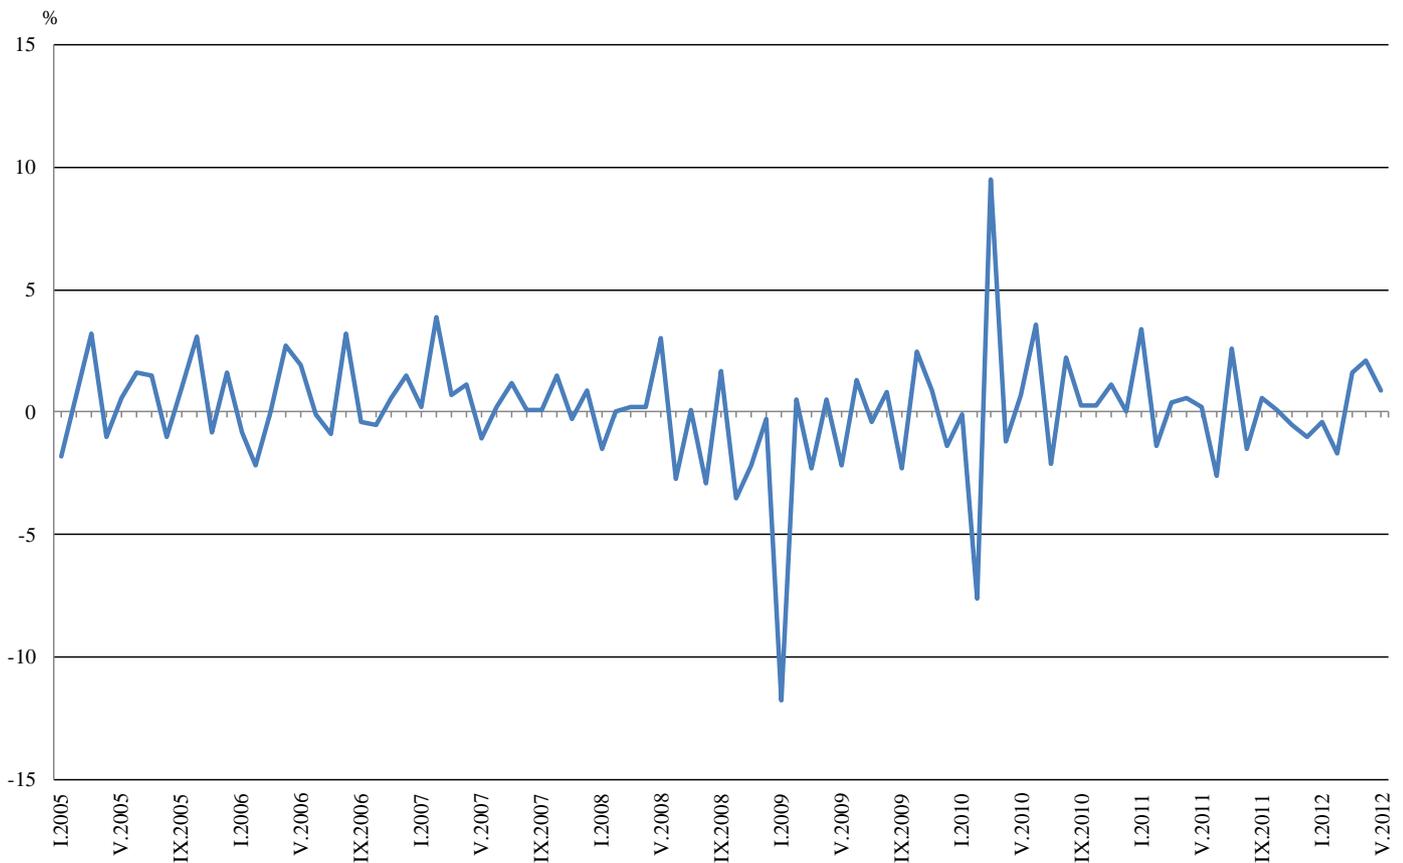

### Monthly comparisons

In May 2012 as compared to April 2012, the seasonally adjusted Industrial Production Index in the mining and quarrying industry increased by 2.6%, in the electricity, gas, steam and air conditioning supply by 1.9% and in the manufacturing by 0.5%.

The most significant increases of production in the manufacturing were seen manufacture of chemicals and chemical products by 22.8%, in the repair and installation of machinery and equipment by 16.7%, in the manufacture of fabricated metal products, except machinery and equipment by 14.0%, in the manufacture of wood and of products of wood and cork, except furniture; manufacture of articles of straw and plaiting materials by 12.3%, in the manufacture of furniture by 12.0%. There was decrease in the manufacture of basic metals by 15.2%, in the manufacture of textiles by 5.9%, in the manufacture of wearing apparel by 3.8%.

**Figure 2. Percentage changes of Industrial Production Indices compared to the previous month**  
(seasonally adjusted)

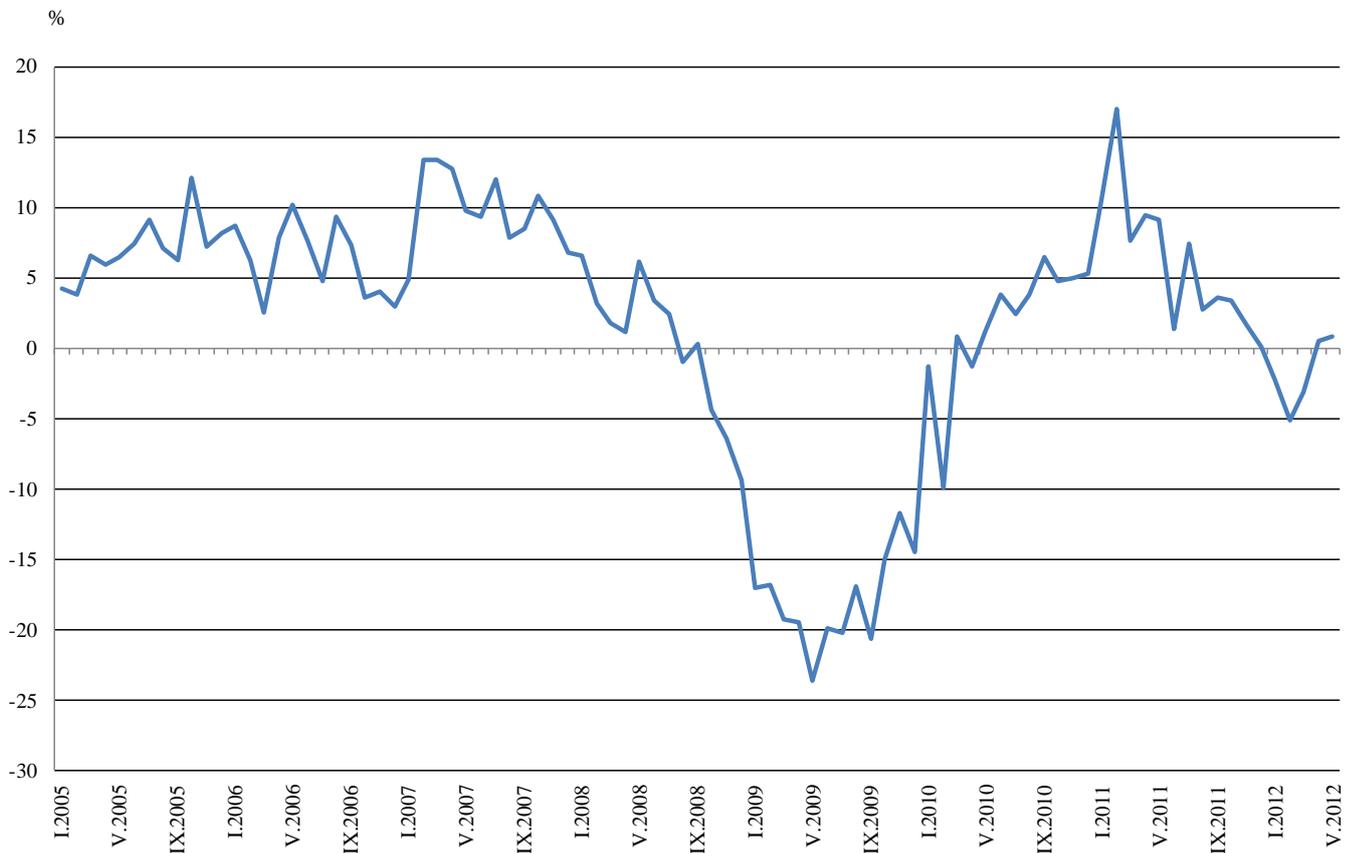

### Annual comparisons

On annual bases in May 2012 Industrial Production Index, calculated from working day adjusted data in the manufacturing increased by 3.9%, while decreases were seen in the mining and quarrying industry by 13.1% and in the electricity, gas, steam and air conditioning supply by 7.0%.

Increases were registered in the production of investment goods by 4.6% and in the production of energy by 1.0%, while in the production of intermediate goods a decrease by 4.3% was seen.

**Figure 3. Percentage changes of Industrial Production Indices compared to the same month of the previous year**  
(working day adjusted)

The final data on Industrial Production and Turnover Indices for April 2012 can be found in NSI internet web-site: (<http://www.nsi.bg/otrasalen.php?otr=46>).
