

INDUSTRIAL PRODUCTION INDICES IN MAY 2014¹

According to the preliminary data the Industrial Production Index², seasonally adjusted³, decreased by 0.7% in May 2014 as compared to April 2014.

In May 2014 working day adjusted⁴ Industrial Production Index rose by 4.9% in comparison with the same month of 2013.

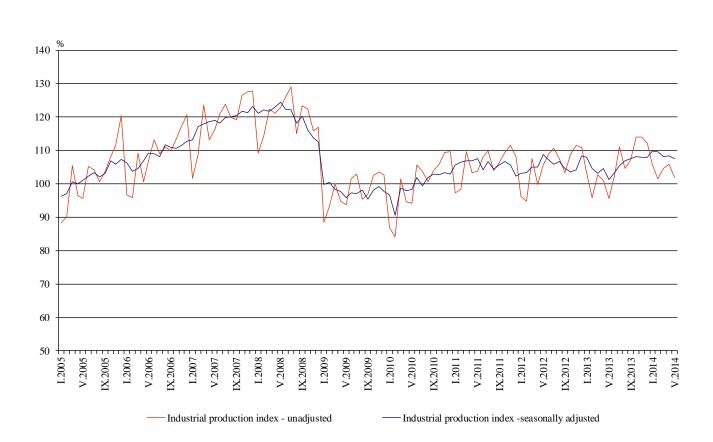

Figure 1. Industrial Production Indices (2010 = 100)

² Monthly Industrial Production and Industrial turnover indices measure changes in production and turnover values of industrial enterprises. This information can be used to access the current economic development and for short-term forecasts. Indices do not measure the actual production level, it aims to measure the average change in value of production between two points of time Indices are compiled on the base of information collected through representative sampling survey on industrial enterprises. The sample covers enterprises with annual turnover more than 97% of total turnover in industry.

Industrial production indices are calculated at constant base year that is to say they are weighted with the structure of the value added at factor costs in the base year.

¹ May 2014 data are preliminary.

³ Seasonal adjustment is a statistical method, which eliminates the seasonal component of time series.

⁴ Working day adjustment is an adjustment for variations caused by calendar effects, different number of calendar and working days in the months, national holydays and outliers (for example the presence of more non-working days in May could contribute to the decline in the production in some activities).

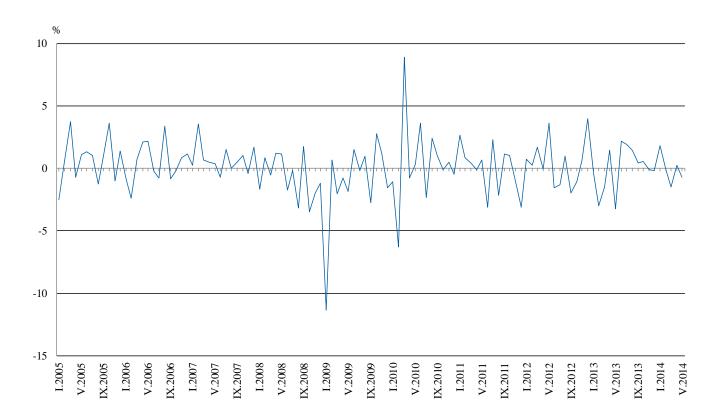

Monthly comparisons

In May 2014 as compared to April 2014, the seasonally adjusted Industrial Production Index decreased in the manufacturing by 1.8% and in the mining and quarrying industry by 0.8%, while in the electricity, gas, steam and air conditioning supply an increase by 0.1% was seen.

The most significant decreases of production in the manufacturing were registered in the manufacture of other transport equipment by 15.7%, in the manufacture of tobacco products by 12.9%, in the manufacture of machinery and equipment by 11.1%, in the manufacture of basic pharmaceutical products and pharmaceutical preparations by 6.1%, in the manufacture of beverages by 6.0%. There was increase in the manufacture of basic metals by 5.4%, in the manufacture of wearing apparel by 3.5%, in the manufacture of other non-metallic mineral products by 2.0%.

Figure 2. Changes of Industrial Production Indices compared to the previous month (Seasonaly adjusted)

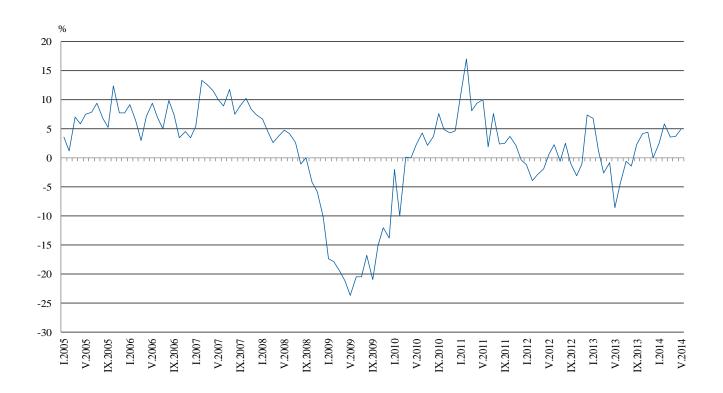

Annual comparisons

On annual basis in May 2014 Industrial Production Index, calculated from working day adjusted data increased in the mining and quarrying industry by 10.5%, in the electricity, gas, steam and air conditioning supply by 7.4% and in the manufacturing by 2.8%.

In the manufacturing, the more significant increases compared to the same month of the previous year were seen in the manufacture of motor vehicles, trailers and semi-trailers by 32.8%, in the manufacture of other transport equipment by 24.9%, in the manufacture of rubber and plastic products by 12.6%, in the manufacture of computer, electronic and optical products by 9.4%, in the manufacture of basic metals by 9.1%. Decreases were registered in the manufacture of tobacco products by 17.4%, in the manufacture of beverages by 13.5%, in the manufacture of leather and related products 6.4%.

Figure 3. Changes of Industrial Production Indices compared to the same month of the previous year (Working day adjusted)

The final data on Industrial Production and Turnover Indices for April 2014 can be found on the NSI website: (http://www.nsi.bg/en).
