

INFLATION AND CONSUMER PRICE INDICES IN APRIL 2022

Consumer price index (CPI)

The **consumer price index** in April 2022 compared to March 2022 was 102.5%, i.e. the monthly inflation was 2.5%. The inflation rate since the beginning of the year (April 2022 compared to December 2021) has been 7.8%, and the annual inflation in April 2022 compared to April 2021 was 14.4% (Figure 1 and Annex, Table 1).

The annual average inflation, measured by CPI, in the last 12 months (May 2021 - April 2022) compared to the previous 12 months (May 2020 - April 2021) was 7.0%.

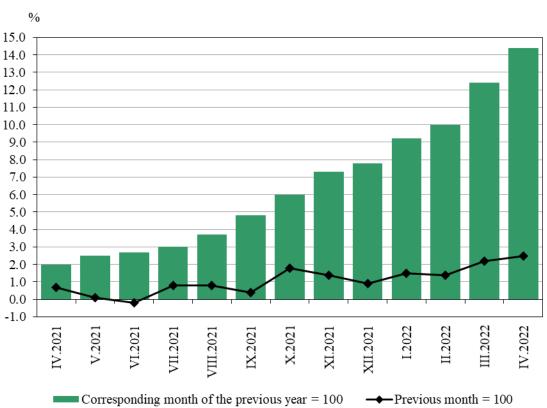

Figure 1. Inflation, measured by CPI by months

In April 2022, compared to the previous month, the prices of goods and services in the main consumer groups changed as follows:

- Food and non-alcoholic beverages an increase of 4.5%;
- Alcoholic beverages and tobacco an increase of 0.2%;
- Clothing and footwear an increase of 6.4%;
- Housing, water, electricity, gas and other fuels an increase of 1.7%;

- Furnishings, household equipment and routine maintenance of the house an increase of 1.5%;
- Health an increase of 0.1%;
- Transport an increase of 3.5%;
- Communications an increase of 0.4%;
- Recreation and culture the prices remained at the level of the previous month;
- Education an increase of 0.2%;
- Restaurants and hotels an increase of 2.6%;
- Miscellaneous goods and services a decrease of 2.9%.

Harmonized index of consumer prices (HICP)

The **harmonized index of consumer prices** in April 2022 compared to March 2022 was 102.1%, i.e. the monthly inflation was 2.1%. The inflation rate since the beginning of the year (April 2022 compared to December 2021) has been 6.8%, and the annual inflation in April 2022 compared to April 2021 was 12.1% (Annex, Table 2).

The annual average inflation, measured by HICP, in the last 12 months (May 2021 - April 2022) compared to the previous 12 months (May 2020 - April 2021) was 5.9%.

In terms of HICP, in April 2022 compared to the previous month, the prices of goods and services in the main consumer groups changed as follows:

- Food and non-alcoholic beverages an increase of 4.2%;
- Alcoholic beverages and tobacco an increase of 0.3%;
- Clothing and footwear an increase of 5.9%;
- Housing, water, electricity, gas and other fuels an increase of 1.9%;
- Furnishings, household equipment and routine maintenance of the house an increase of 1.6%;
- Health an increase of 0.1%;
- Transport an increase of 3.4%;
- Communications an increase of 0.4%;
- Recreation and culture an increase of 0.3%;
- Education an increase of 0.2%;
- Restaurants and hotels an increase of 2.1%;
- Miscellaneous goods and services a decrease of 1.4%.

Price index of a small basket (PISB)

The **price index of a small basket** in April 2022 compared to March 2022 was 102.9%, and the overall increase since the beginning of the year (April 2022 compared to December 2021) has been 109.1% (Annex, Table 3).

In April 2022, compared to the previous month, the prices of goods and services in the small basket for the 20% of households with the lowest income changed as follows:

- Food products an increase of 4.5%;
- Non-food products an increase of 1.8%;
- Services an increase of 0.2%.

Methodological notes

The consumer price index (CPI) is the official measure of inflation in the Republic of Bulgaria. It measures the total relative price change of goods and services used by households for private (non-production) consumption and is calculated by applying the structure of the final monetary consumption expenditures of Bulgarian households. The main source of information for the expenditures is the household budget survey in the country. The CPI in year t is calculated with the expenditures' structure of year t-1.

The Harmonized Index of Consumer Prices (HICP) is the comparable measure of inflation across EU Member states. It is one of the criterions of price stability and the readiness of Bulgaria to join the eurozone. HICP, as well as CPI, measures the total relative price change of goods and services. Both indices are calculated using the same basket of goods and services, but differ with respect to the weights used. HICP is calculated using weights, which reflect the individual and the collective consumption of all households (incl. institutional and foreign households) in the economic territory of the country. The main source of information for HICP weights is the national accounts (NA) data. For the calculation of the HICP in 2022, NA data for households' final monetary consumption expenditures (HFMCE) - domestic concept in 2020 is used. NA 2020 data are reviewed and updated to make them representative of the year 2021 following Eurostat's methodological guidance on the compilation of HICP weights in case of large changes in consumer expenditures¹.

In compliance with Regulation (EC) No. 2015/2010 since January 2016, the base year for HICP has been changed and all indices have been calculated and published using 2015 as a base year. The time series have been recalculated according to the new base year and have been posted on the NSI website (www.nsi.bg).

The **Price Index of a Small Basket (PISB)** is a measurement of the relative average price changes of 100 socially useful and vital living goods and services. The weights of this index reflect the expenditures of the 20% lowest households' incomes. The source for weights information is the Households Budget Survey in the country. This index in year *t* is calculated with the weights of year *t*-1.

The **chain** consumer price indices measure the price change in the current month compared to the previous month. The chain consumer price indices are used as a measure of **monthly inflation**.

The **12-month** consumer price indices measure the price changes occurring between the current month and the same month of the previous year. The 12-month consumer price indices are used as a measure of **annual inflation.**

Consumer price indices **over December of the previous year** measure the accumulated changes in prices of the current month with respect to December of the previous year. Consumer price indices over December of the previous year are used as measures of **inflation since the beginning of the year**. In December of each year, the 12-months index is equal to the index over December of the previous year.

The **annual average** consumer price indices measure the average price change during the 12 months of the current year compared to the average price change during the 12 months of the previous year. The annual average consumer price indices are used as a measure of the **annual average inflation**.
