

ETHNO-CULTURAL CHARACTERISTICS OF THE POPULATION AS OF SEPTEMBER 7, 2021

Final data

The ethno-cultural characteristics of the population have been the subject of observation since the beginning of the 135-year history of censuses in the country. In the first censuses conducted at the end of the 19th century (1887 and 1892), the characteristics 'religion' and 'native language' were observed. In 1900, the characteristic 'nationality' was included. In the census conducted at the end of 1946, religion was dropped, and the other two characteristics appeared until 1975, using the designation 'mother tongue' instead of native language. Only in 1985 were these characteristics excluded from the census program. In the 1992 and 2001 censuses, the characteristics 'ethnic group', 'mother tongue' and 'religion' were observed, and in the 2011 and 2021 censuses, 'religiosity' was added.

In the last three censuses, questions related to ethno-cultural characteristics were voluntary. The definitions and methodology used, as well as the formation of the questions and answers in the census questionnaire, are fully consistent with the main principles and recommendations of the United Nations, related to the study of the population by ethnic and religious characteristics:

- ✓ Voluntary responses;
- ✓ Self-determination;
- ✓ Possibility of freely recorded answer.

Self-determination by ethnicity

The ethnic group is a community of persons who are close in origin, way of life, culture and language.

The trends in demographic processes, causing changes in the number and structures of the population, affect all ethnic groups in the country. As a result, the absolute number of the population of all three main ethnic groups decreased, and there were no significant changes in the ethnic structure between the last two censuses.

As of September 7, 2021, **the Bulgarian ethnic group** comprised 5 118 494, or 84.6% of the persons who answered the question about ethnicity. Compared to 2011, the share of this group decreased by 0.2 percentage points.

508 378, or 8.4% of the respondents, identified themselves as belonging to **the Turkish ethnic group**. Their relative share decreased by 0.4 percentage points compared to 2011.

266 720, or 4.4% of the respondents, identified themselves as the third-largest **Roma ethnic group**. The relative share of the population from this ethnic group decreased by 0.5 percentage points compared to 2011.

79 006 people, or 1.3%, identified themselves as belonging to **other ethnic groups**.

15 746 (0.3%) persons indicated that **they could not self-determine**. 63 767, or 1.0% of respondents, answered **'I do not want to answer'**.

Fig. 1. Structure of the population by ethnicity and census years¹

Territorial distribution by ethnic self-determination

At the beginning of the last century, 18.2% of Bulgarians, 16.1% of Turks and 20.5% of Roma lived in cities. Over time, the Bulgarian ethnically self-identified population has urbanized considerably more than the other two main ethnic groups. As of September 7, 2021, 77.5% of the Bulgarian, 38.4% of the Turkish and 51.0% of the Roma ethnic groups live in the cities. The process of urbanization least affected the Turkish ethnic group, the majority of which throughout the period 1900 - 2021 continued to live in villages.

Fig. 2. Relative share of the population of the three main ethnic groups living in cities by census years

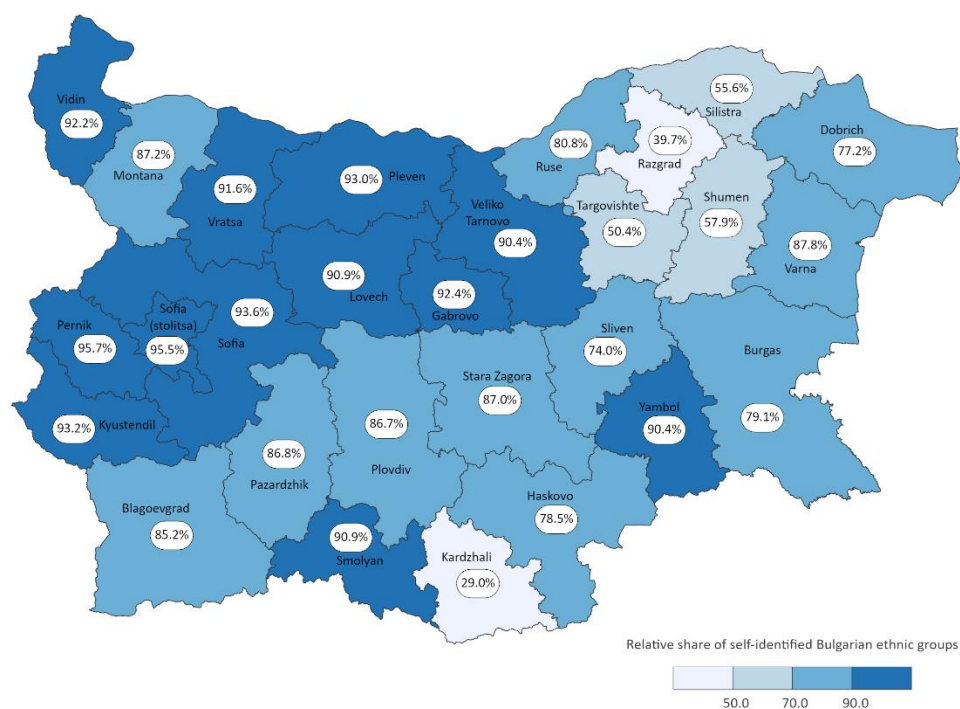

¹ By 1992 incl., those who have not declared their ethnic group were also included in the group 'Other'. In 2001, those who have not declared their ethnic group were also included in the group 'I cannot determine'. Due to the voluntary nature of the ethnic self-determination question in 2011 and 2021, the structure was calculated for the total number of persons who answered this question, and not for the entire population.

In the presentation of the structure of the population by ethnicity and the calculation of the relative shares of the respective categories, the persons added from administrative sources, for whom there is no information in the registers used in the census, are not included.

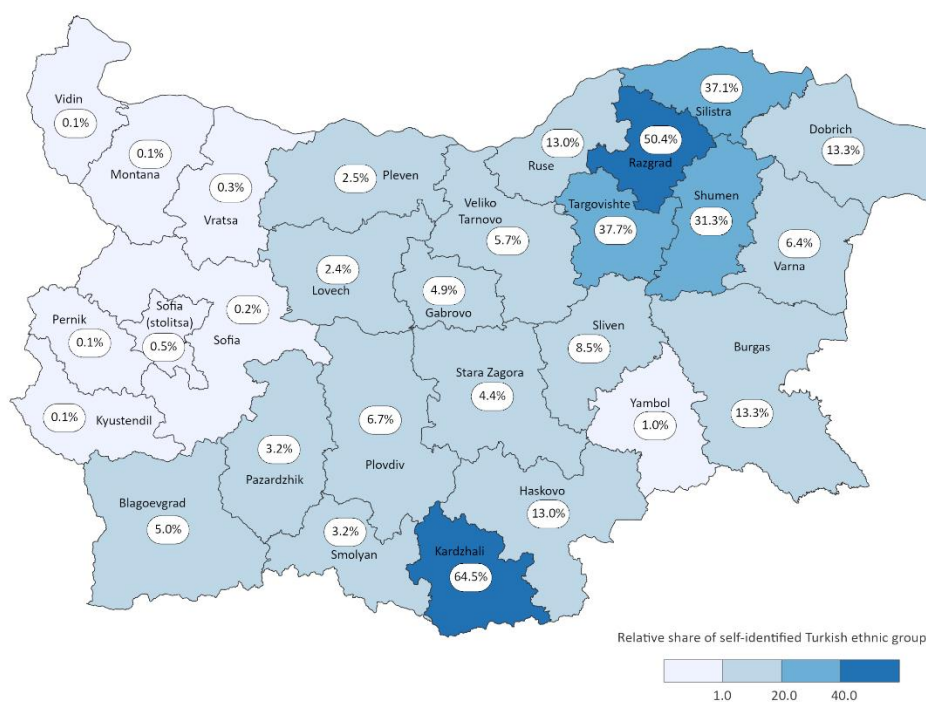

The Bulgarian ethnic community predominates in all districts with the exception of Kardzhali and Razgrad districts, where it forms 29.0% and 39.7% of the district's population, respectively.

Fig. 3. Relative share of self-identified Bulgarian ethnic groups by district as of September 7, 2021

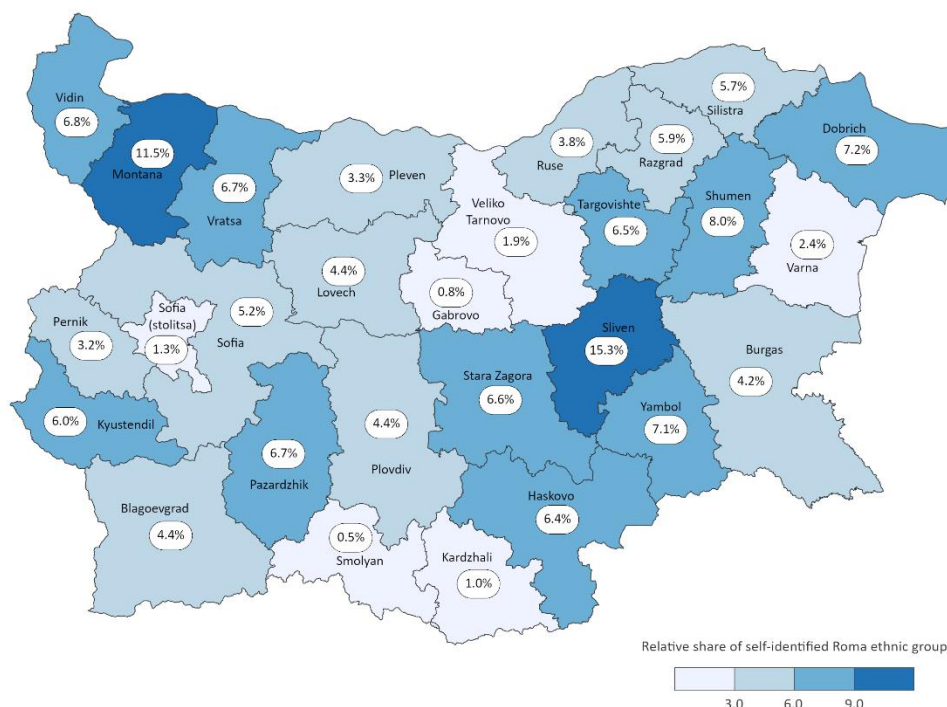

The persons who identified themselves as belonging to the Turkish ethnic community are territorially concentrated mainly in the districts of Kardzhali (64.5%), Razgrad (50.4%), Targovishte (37.7%), Silistra (37.1%) and Shumen (31.3%). In total, almost half of the population, self-identified to the Turkish ethnic group, lives in the five districts - 48.4%.

Fig. 4. Relative share of self-identified Turkish ethnic group by district as of September 7, 2021

Persons from the Roma ethnic group are distributed territorially in all districts of the country. The largest share of the Roma ethnic group is in the districts of Sliven - 15.3% and Montana - 11.5%, followed by Shumen - 8.0%, Dobrich - 7.2% and Yambol - 7.1%.

Fig. 5. Relative share of self-identified Roma ethnic group by districts as of September 7, 2021

Age and ethnicity

The process of aging of the population, characteristic of the last decades, affects to the greatest extent persons from the Bulgarian ethnic community. In this group, the share of the population aged 65 and over is the highest - 25.0%, at 19.8% and 7.3% for the Turkish and Roma ethnic groups, respectively.

Among the three main ethnic communities, the share of the young population (0 - 14 years of age) is the highest among the Roma - 26.6% of those self-identified as this ethnic group. The share of young people among the Turkish ethnic group is almost twice as small (13.8%) and this share is the lowest among the Bulgarian community - 12.0%.

Fig. 6. Age structure of the population by ethnic groups as of September 7, 2021

One-third (33.1%) of those who could not identify their ethnicity and one-fifth of those who did not want to answer were under the age of 14.

Education and ethnicity

There are significant differences in the educational structure of the population by ethnicity. While 79.7% of self-identified Bulgarians aged seven and over are well educated (29.2% with higher education and 50.5% with secondary education), 44.0% of the population from the Turkish ethnic group are well educated (8.1% with higher education and 35.9 % with secondary education), and for the Roma ethnic group, the relative share of this indicator is 15.2%, respectively 0.8% with higher education and 14.4% with completed secondary education.

Compared to 2011, a positive trend of increasing the absolute number and the relative share of persons with completed higher and secondary education is observed in all three main ethnic groups. In ten years, the share of the population with completed higher education increased from 0.3% to 0.8% among the Roma ethnic group, from 4.1% to 8.1% among the Turkish, and from 22.8% in 2011 to 29.2% in 2021 among those self-identified as belonging to the Bulgarian ethnic group.

Fig. 7. Distribution of the population by ethnicity and degree of completed education as of September 7, 2021

Of the persons aged 15 and over, 0.3% of those self-identified as belonging to the Bulgarian ethnic group, 1.9% from the Turkish and 6.4% from the Roma ethnic group have never attended school.

Children of compulsory school age (7 - 15 years of age) left out of the educational process are 8.0% of the Roma community, 4.4% of the Turkish community and 1.3% of the self-identified Bulgarian ethnic group in this age group.

Literacy is defined as the ability to read and write with understanding of what is read and written. As of September 7, 2021, 11.8% of self-identified Roma ethnic group aged 9 and over are illiterate. This share is 3.4% and 0.5% for the self-identified Turkish and Bulgarian ethnic groups, respectively.

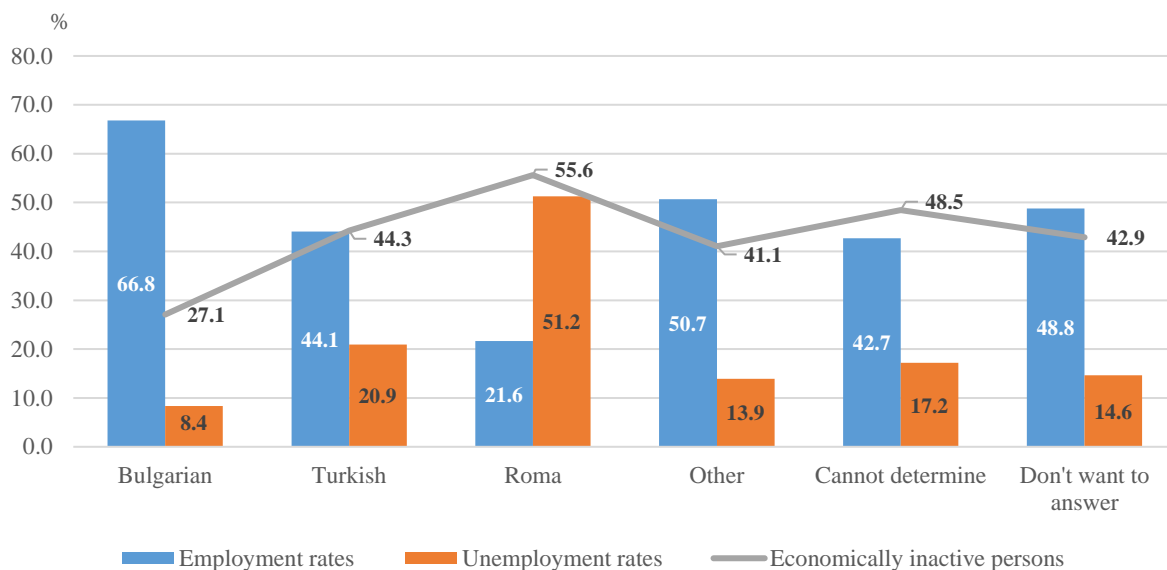

Economic activity and ethnicity

The data on the economic characteristics of the population refer to the position of persons on the labour market during the week preceding the critical moment of the census - August 31 - September 6, 2021.

There are significant differences in the labour market participation of individuals from different ethnic groups. The employment rate in the age group from 15 to 64 years is highest among the Bulgarian ethnic group with an employment rate of 66.8%, and the lowest among the Roma ethnic group - 21.6%.

Unemployment is highest among the self-identified Roma ethnic group. More than half (51.2%) of economically active persons from this ethnic group were unemployed during the observed period. Every fifth economically active person aged 15 - 64 from the Turkish ethnic group was also unemployed during the observed period. This indicator is the lowest among self-identified Bulgarian ethnic groups - 8.4% of economically active persons.

Fig. 8. Employment and unemployment rates and economically inactive persons by ethnicity for persons aged 15 - 64

Unemployed and not participating in education aged 15 - 29 during the observed period ranged from 17.5% for the Bulgarian ethnic group, 38.0% for the Turkish to 62.6% for the Roma.

Mother tongue

Mother tongue is the second ethno-cultural characteristic traditionally studied in censuses.

The mother tongue is the first language learned at home in early childhood.

Bulgarian is the mother tongue of 5 037 607 people, or 85.3% of the population, Turkish - for 514 386 people, or 8.7%, and Romani - for 227 974 people, or 3.9% of those who answered the question.

Another mother tongue was indicated by 62 906 people, or 1.1%.

The persons who indicated that **they could not determine their mother tongue** were 10 633 (0.2%). 49 602, or 0.8% of respondents, answered, **'I do not want to answer'**.

Fig. 9. Population structure by mother tongue as of September 7, 2021²

The relationship between ethnic self-determination and mother tongue self-determination is highly pronounced.

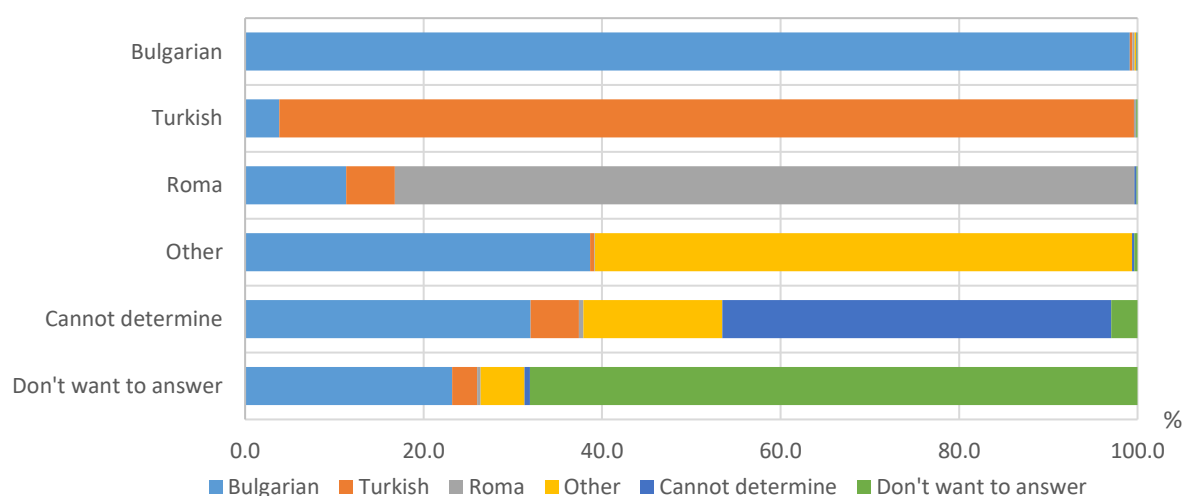

The most homogeneous in terms of mother tongue is the Bulgarian ethnic group - among those who answered both questions about ethnicity and mother tongue, 99.1% of the persons from the Bulgarian ethnic group indicated Bulgarian as their mother tongue, 15 687 (0.3%) - Turkish, 11 216 (0.2%) - Roma and 10 224 (0.2%) - other.

Among those self-identified as belonging to the Turkish ethnic group, 481 521 (95.8%) have Turkish as their mother tongue, and 19 354, or 3.8%, have Bulgarian as their mother tongue.

The Roma ethnic group is somewhat more diverse in its self-definition by mother tongue:

- ✓ 215 792 people, or 82.8%, indicated Romani as their mother tongue;
- ✓ 29 489, or 11.3% - Bulgarian;
- ✓ 14 185, or 5.4% - Turkish.

Fig. 10. Structure of the population by ethnicity and mother tongue as of September 7, 2021

² In the presentation of the structure of the population by mother tongue and the calculation of the relative shares of the respective categories, the persons added from administrative sources for whom there is no information in the registers used in the census are not included.

The territorial distribution of the population according to the indicated mother tongue is largely identical to the distribution by ethnicity.

Fig. 11. Distribution of the population by mother tongue and regions

Religious denomination

Religious denomination is the affiliation of a person to a given historically established group, characterized by performing of specific religious rituals (Eastern Orthodox, Catholic, Protestant, Muslim, etc.).

4 219 270, or 71.5% of those who answered the question, self-identified as Christians. Eastern Orthodox Christians predominate among them - 4 091 780, or 97.0% of those who indicated a Christian religious denomination, followed by persons with a Protestant religious denomination - 69 852 (1.7%), Catholic - 38 709 (0.9%), and 5 002 (0.1%) indicated the Armenian apostolic creed. The answer 'other Christian' was chosen by 13 927, or 0.3% of those who answered the question.

638 708 persons, or 10.8%, indicated Muslim religious denomination, 1 736 Jews, and 6 451 persons professed other religions.

As of September 7, 2021, 305 102 (5.2%) individuals responded that they did not have a religion, 259 235 (4.4%) had difficulty identifying their religion, and 472 606 (8.0%) indicated that they did not want to answer.

Fig. 12. Structure of the population by religion as of September 7, 2021³

The age distribution of the persons who self-identified to the various religions shows that the highest relative share of adults (65+ years) is among the persons professing the Jewish religion - 28.6%, and the lowest - among those who indicated 'other' (7.0%). Similar to the distribution by ethnicity, where the highest share of persons under the age of 14 is in the 'cannot determine' category - 43.7% of those who indicated this answer.

Fig. 13. Age structure of the population by religion as of September 7, 2021

³ The presentation of the structure of the population by religion and the calculation of the relative shares of the respective categories do not include persons added from administrative sources for whom there is no information in the registers used in the census.

Religious denomination and ethnicity

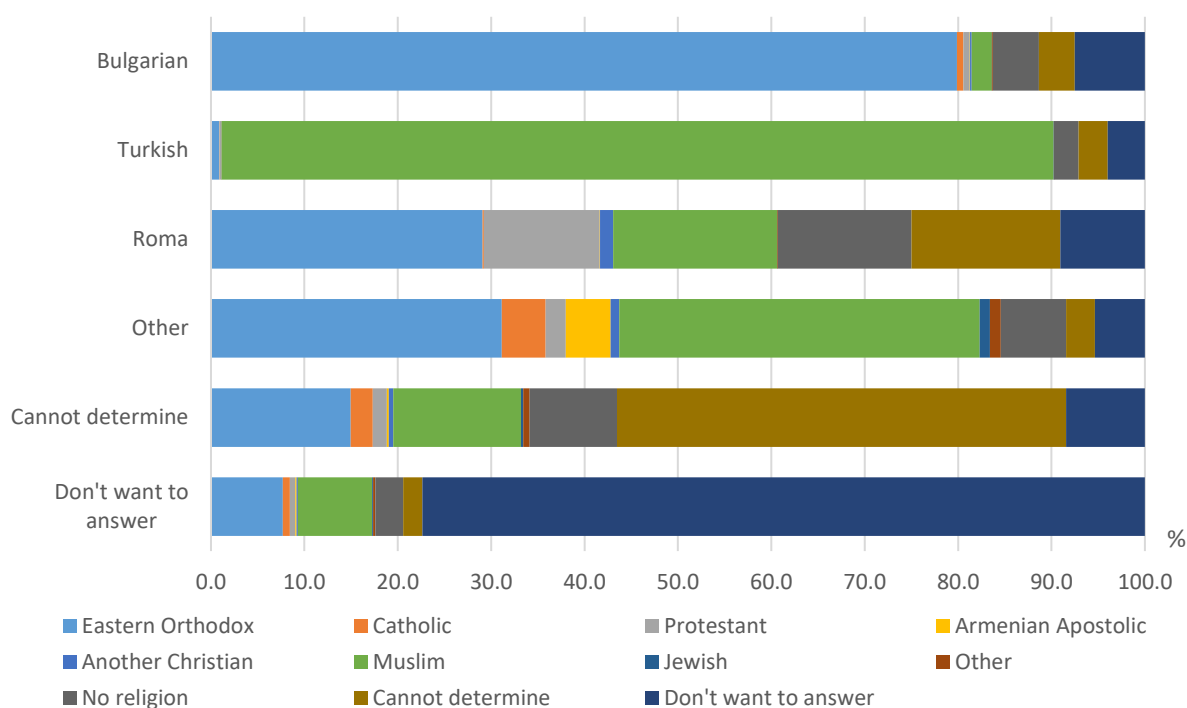

Among the persons who identified themselves as belonging to the Bulgarian ethnic group, 3 980 131 people, or 79.9%, are Eastern Orthodox, 33 749 (0.7%) - Catholic, 34 152 (0.7%) - Protestant and 107 777 (2.2%) - with Muslim religious denomination. 245 845 (4.9%) persons indicated the answer 'I don't have', and 'I cannot determine' - 190 807, or 3.8% of those who self-identified to the Bulgarian ethnic group.

For 447 893 people (89.1%) of the self-identified Turkish ethnic group, the stated religion was Muslim, 4 435 (0.9%) chose the Eastern Orthodox religious denomination, 13 195 (2.6%) of this ethnic group indicated that they had no religion, 15 622 (3.1%) were unable to self-determine.

Among those self-identified as belonging to the Roma ethnic group, those with the Eastern Orthodox religious denomination predominate - 75 745, or 29.1%. Muslim religious denomination was indicated by 45 817 (17.6%) of the Roma, Protestant - by 32 325 (12.4%), 'I do not have' religion was noted by 37 232 (14.3%) and 'cannot determine' by 41 517 (15.9%) from the self-identified to the Roma ethnic group.

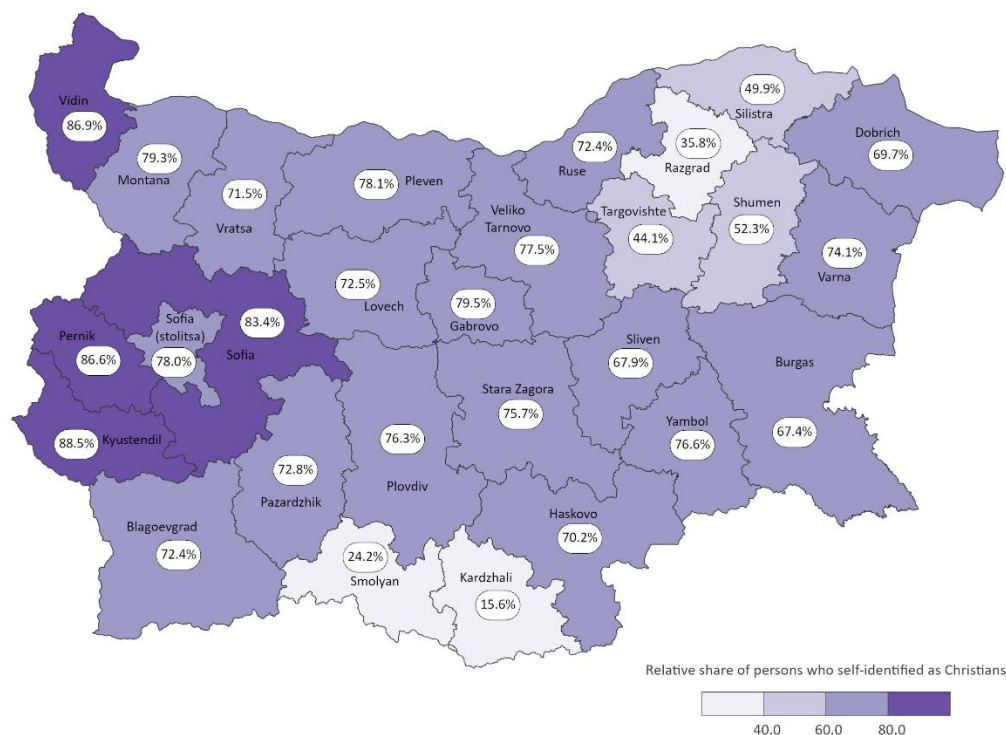

The highest share of persons who declared that they do not wish to indicate their religion is among the Roma ethnic group - 9.1%, and the lowest - among persons who self-identified as belonging to the Turkish ethnic group (4.0%).

Fig. 14. Structure of the population by ethnicity and religion as of September 7, 2021

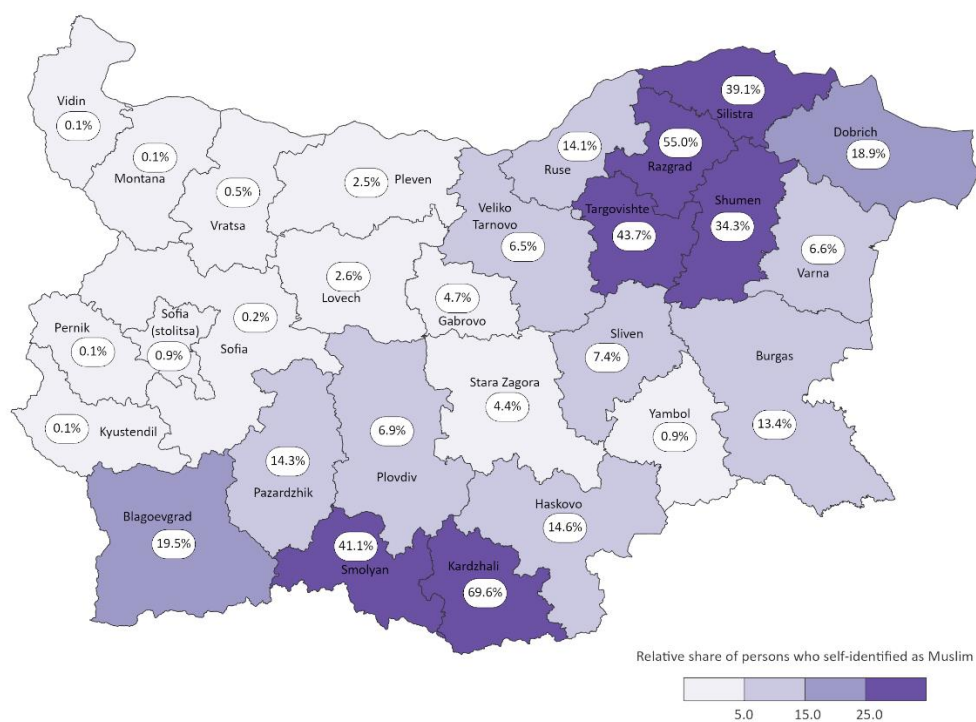

In terms of territory, the highest share of self-identified Christians is in the districts of Kyustendil (88.5%), Vidin (86.9%), Pernik (86.6%) and Sofia (83.4%), and the lowest - in the districts of Kardzhali (15.6 %), Smolyan (24.2%) and Razgrad (35.8%).

Fig. 15. Relative share of persons who self-identified as Christians, by district as of September 7, 2021

The persons who self-identified as Muslim are mainly concentrated in the districts of Kardzhali (69.6%), Razgrad (55.0%), Targovishte (43.7%), Smolyan (41.1%), Silistra (39.1%) and Shumen (34.3%). This share is the lowest in the districts of Vidin, Montana, Pernik and Kyustendil - 0.1% of those who answered the question.

Fig. 16. Relative share of persons who self-identified as Muslim, by district as of September 7, 2021

Religiosity

Religiosity is a worldview and behaviour, attitudes and customs based on the belief in a divine or higher being, supernatural forces, as well as a set of moral norms, practices, values, institutions and rituals accompanying this worldview.

As of September 7, 2021, 3 031 289, or 51.4% of respondents, answered 'Yes' to the question 'Are you religious?', 24.7% answered 'No', 13.0% 'can't tell' and 10.9% have chosen the answer 'I do not want to answer the question'. Of those who answered yes, 56.0% were women and 44.0% were men.

Combining the religion and religiosity questions shows that 77.6% of those who self-identified as Muslim stated that they were religious, while among those who self-identified as Christian this share was 59.1%.
