REPUBLIC OF BULGARIA

NATIONAL STATISTICAL INSTITUTE

STATISTICAL REFERENCE BOOK 2025

SOFIA, 2025

Dear Users,

We would like to present to your attention the latest edition of the 'Statistical Reference Book 2025', in which are collected aggregated statistical data for the period 2020 - 2024. The information includes a number of key aspects of the social, economic and demographic development in the country.

The data are systematically organized into 24 thematic sections and are presented in both graphical and tabular formats, which ensures their accessibility and makes them easy for interpretation by a broad spectrum of users, including researchers, politicians, institutions and the general public.

The Reference book is a result of the effective cooperation between the National Statistical Institute and our partners - the Bulgarian National Bank, the statistical bodies, Eurostat, the Organisation for Economic Co-operation and Development (OECD) and other international institutions.

The provided statistical information is an important source for the formation of policies and for the decision-making of public and state interest. For the purpose of fulfilling its mission - to provide accurate, objective and accessible data, NSI is guided by the fundamental principles of professional independence, impartiality, reliability, statistical confidentiality, and cost-effectiveness.

As a response to the changing needs of the users and the increasing demand for high-quality data, NSI remains committed to innovation, adaptability and continuous improvement. We actively seek cooperation, promote sustainability in our activity, and we keep proactive dialogue both with our national and our international stakeholders.

I would like to express my sincere gratitude to all the respondents and users of statistical information for being active and committed. Together, we contribute to the development and dissemination of statistics in Bulgaria, including among young people.

I would also like to thank all colleagues for the high professionalism and efforts they put in the preparation of the Statistical Reference Book 2025.

Assoc. Prof. Atanas Atanasov, PhD
President of the National Statistical Institute

TABLE OF CONTENTS

Стр.

Preface	3
Abbreviation and symbols	8
I. Geographical features and climate	
Territory and climate	12
Rivers, lakes and mountains	14
II. Population	
Population and demographic processes	18
Age-sex structure	20
Births	22
Mortality	24
Marriages and divorces	26
Population by district	28
Fertility and mortality by district	30
Migration of the population	32
III. Labour market	
Labour force	36
Labour force by district	38
Employment	40
Employment by district	44
Employees	46
Unemployment	48
Unemployment	50
Unemployment by district	52
Average annual wages and salaries	54
IV. Education	
Types of educational institutions	58
Students enrolled	60
Teaching staff	62
Pre-primary education	62
Schools education	63
Vocational training	64
Vocational training - IV level	66
Tertiary education	66
Schools, teaching staff and pupils by district	68
Coverage rate of education system and education expenditure	70
V. Culture and art	
Publishing	72
Performing arts and cinemas	74
Museums and community clubs	76
Libraries	78
Radio and television activities	80

**VI. Health**

Health establishments and medical personnel	84
Medical personnel by district	87
Registered cases of malignant neoplasms and active tuberculosis	89

**VII. Household income, expenditure
and consumption**

Total household income	92
Total household expenditure	94
Consumption of main foods	96
Purchasing power of household	98
Poverty indicators	100

VIII. Criminality and justice

Crimes with penalty inflicted	104
Persons convicted	106

IX. National accounts

Gross domestic product	110
Gross value added	112
Compensation of employees and gross operating surplus/gross mixed income	114
Investments and consumption	116
Labour productivity	118

X. Finance

Monetary aggregates	122
Claims of the monetary financial institutions on government and non-government sectors	124
Interest rates	126
Deposits and loans of Households and NPISHs sector	128

XI. Prices

Consumer price indices	132
Harmonized index of consumer prices	136
Industrial producer price indices on the domestic market	138
Producer price indices in agriculture	140
Price indices of goods and services, currently consumed in agriculture	142
Price indices of goods and services contributing to agricultural investment	144
Total index of goods and services in agriculture	145

XII. Exports and imports of goods

Foreign trade turnover	148
Exports by main trade partner countries	150
Imports by main trade partner countries	152
Exports and imports by commodities	154

**XIII. Balance of payments**

Balance of payments	158
Foreign direct investments	160

XIV. Tangible fixed assets

Expenditure on acquisition of tangible fixed assets	164
Acquired tangible fixed assets	166

XV. Domestic trade; Accommodation and food service activities

Retail sales premises	170
Turnover in domestic trade, accommodation and food service activities	172

XVI. Industry

Production value of industrial enterprises	176
Structure of the production value of industrial enterprises	178
Indices of industrial production, calendar-adjusted	180
Industrial products in kind	182

XVII. Construction and housing fund

Production of enterprises in construction	186
Housing fund	188
Permits issued for buildings and dwellings completed	190

XVIII. Energy

Overall energy balance sheet	194
Electricity and heat	200

XIX. Transport

Transport - main data on transport development	204
Goods and passengers carried and transport performance	206

XX. Tourism

Accommodation establishments	210
Nights spent	212
Trips of Bulgarian residents abroad and arrivals of visitors to Bulgaria	214

XXI. Forestry

Total forest area	218
Management of the forests	220
Wood	222
Game	224

**XXII. Agriculture**

Utilized agricultural area and arable land	228
Agricultural crop production	230
Livestock	232
Economic accounts for agriculture	234

XXIII. Environment

Air emissions	238
Water	242
Waste	244
Environmental protection expenditure accounts	248
Tangible fixed assets with ecological use	251
Environmental goods and services	253
Packages placed on the market	256
Underground reserves	257
Registered noise levels	258
Protected natural scenery	260

XXIV. Research and development activity and innovation activity

Research and development activity (R&D)	264
Innovation activity	266

I. GEOGRAPHICAL FEATURES AND CLIMATE

Territory and climate

The Republic of Bulgaria is situated on the Eastern Balkan Peninsula in Southeastern Europe, along the Black Sea. Total area is 110 371.9 sq. km (excl. the aquatory of the Danube river and Black Sea).

The climate of Bulgaria is temperate continental with a transition towards a subtropical climate in its Mediterranean version (in the southern parts of the country), with four seasons.

34% of the country's territory is covered with forests (non-coniferous and coniferous). The varied environment is a natural habitat for valuable animal species.

Rivers, lakes and mountains

The rivers are comparatively short and low-water. The longest river in Bulgaria is Iskar - 368 km long, while the river with the highest flow is Maritsa. The main rivers of Bulgaria are the Danube (470 km bordering Romania), Vit, Osam, Yantra (tributaries of the Danube), Tundzha, Kamchiya, Arda, Mesta and Struma.

60% of the total area is covered with hills and mountains. The mountains are part of the Alpine-Himalayan mountain chain situated on two continents - Europe and Asia. The mountains are accessible throughout the year and offer unlimited opportunities for entertainment, sports and tourism. The highest mountain in Bulgaria and in the Balkan Peninsula is Rila with its highest peak Musala (2 925 m of altitude).

II. POPULATION

Population and demographic processes

Survey objects of demographic statistics are the population and demographic events.

The population number and structures are calculated as of 31.12., based on the number and structures of population of the previous year and the demographic events (live births, deaths, immigrants and emigrants) registered during the year.

Demographic events include births, deaths, marriages, divorces and migration. They are registered at the moment of their occurrence during the reporting year.

Data source on vital events and migration is the Unified System for Civil Registration and Administrative Services of the Population.

In 2024 natural growth rate is minus 7.3 per 1 000 population (-6.8 ‰ for 2023).

Figure 1. Marriage, birth and death rates and crude rate of natural change of the population

1. Main demographic indicators

	2021	2022	2023	2024
Population as of 31.12. - in thousands	6838.9	6447.7	6445.5	6437.4

2011	7365	3587	3778	72.5
2021	6520	3136	3384	73.4

¹ Up to 1956 - resident population, since 1965 - permanent population.

Age-sex structure

The population age structure is represented by distribution of the population by age groups. Population age is calculated in completed years as of 31.12. of the respective year.

By the end of 2024 the number of persons aged 65 and over is 1 544 245, or 24.0% of the country's population. Compared to 2023, the share of population aged 65 and over increases by 0.2 percentage points.

As of 31.12.2024, children up to 15 years of age in the country are 901 843 or 14.0% of the total population number. The share of children up to 15 years decreases by 0.1 percentage points compared to 2023.

The population ageing during the years lead to an increase of the population mean age. It has increased from 41.0 years in 2004 to 45.3 years at the end of 2024.

Figure 2. Age structure of the population by gender as of 31.12.2024

¹Working age status according to the Pension Ordinance adopted by the Council of Ministers (Ordinance No. 30, State Gazette No 21/17.03.2000).

Births

Births include the number of live-born and stillborn children, and not the cases of giving birth where one, two or more children could be born.

There were 53 727 births registered in 2024, of which 53 428 (99.4%) - live births. The crude birth rate (number of live births per 1000 population) was 8.3‰.

Total fertility rate (TFR), representing the average number of children that could be born by a woman during her fertile period was 1.72 children in 2024, compared to 1.81 in the previous year.

Mortality

The number of deaths includes the dead persons registered during the year.

Mortality level remains too high. Crude death rate (number of dead persons per 1 000 population) is 15.6‰ in 2024.

The infant mortality rate (number of children who die up to 1 year of age per 1 000 live births) was 4.5‰ in 2024 compared with 4.9‰ in 2023. Although infant mortality has been lowest in the country's demographic development in recent years, it continues to be higher than in European countries.

Life expectancy shows the life expectancy of the new-born under the hypothesis that the age-specific mortality observed during the respective year will remain the same. Data on the period 2022 - 2024, the life expectancy is 71.89 years for males and 79.28 years for females.

More information about breaks in time series and comparability of data from the Labour Force Survey could be found at the website of NSI, section 'Labour Market', Labour Force Survey, Annual data, 'Metadata and Methodology': <https://nsi.bg/en/content/4002/annual-data>.

Labour force

The labour force (the economically active population) consists of the persons, who put in or offer their labour for the production of goods and services. The labour force comprises the employed and the unemployed persons.

The activity rate is the ratio between the economically active population and the total population (in the respective group).

The source of the data is the Labour Force Survey.

Employment

Employed persons are persons 15 to 89 years of age who during the reference period:

- performed some work for at least one hour for pay in cash or in kind or other income;
- did not work but had a job or an enterprise, a business from which they were temporarily absent due to the following reasons:
 - holidays, illness, maternity or paternity leave, working time arrangement;
 - participation in job-related training;
 - off-season, where persons continue regularly to perform tasks and duties for the job or business, excluding fulfilment of legal or administrative obligations;
 - other absence (incl. unpaid parental leave for taking care of a child between 2 and 8 years of age), where the expected duration of this absence is 3 months or less.

Persons that produce agricultural goods are considered employed if the main part of these products is intended for sale or barter.

Employers are the persons who by themselves or in co-operation with other people manage their own enterprise, business, farm, professional practice or perform independently other work, and employ at least one other person.

Self-employed are the persons who by themselves or in co-operation with other people work in their own enterprise, business, farm, professional practice or perform independently other work, and do not employ any other person.

Employees are the persons who work for a public or private employer and who receive a consideration in cash or in kind in the form of wages, salaries, fees, remuneration by civil contract, etc.

Unpaid family workers are the persons who work without pay in a firm, enterprise or farm, owned and operated by a family member.

The employment rate is the ratio between the employed population and the total population (in the respective group).

The source of the data is the Labour Force Survey.

Employees

Employees are all persons who have a labour contract with their employer by virtue of the Labour Code or the Civil Servants Act and who receive remuneration in cash or in kind for certain quality and quantity of work done. The average annual number of employees under labour contract is the arithmetic mean value of the average monthly number of employees. The average monthly number of employees is the arithmetic mean value of the daily number of employees (sum of the daily number of employees divided by the number of days of the reference month).

Unemployment

Unemployed persons are persons 15 to 74 years of age who were not employed during the reference week, and

- were currently available for work, i.e. were available for paid employment or self-employment before the end of the 2 weeks following the reference week; and
- were actively seeking work in the four-week period ending with the reference week or found a job to start within a period of at most 3 months from the end of the reference week.

The duration of unemployment is defined by the shorter of the following two periods:

- the duration of looking for a job; or
- the length of time passed since last employment.

The source of the data (excluding data on registered unemployment) is the Labour Force Survey.

The source of the data on the unemployed persons registered at the Labour Offices is the National Employment Agency.

Unemployment

The unemployment rate is the ratio between the unemployed persons and the economically active population (the labour force).

The long-term unemployment rate is the ratio between the number of the long-term unemployed persons (unemployed for one or more years) and the economically active population.

Discouraged persons are the persons aged 15 - 74 years, who are not in the labour force (economically inactive population) and who want to work, but who do not actively look for a job, because they do not believe they will find a suitable job.

Unemployment by district

The unemployed persons and the unemployment rates are presented by statistical regions in accordance with the Classification of Territorial Units for Statistical Purposes in Bulgaria, in force since 14 February 2009, harmonized with the European Classification of Territorial Units for Statistics (NUTS), and by districts.

The source of the data on the unemployed persons registered at the Labour Offices is the National Employment Agency.

Average annual wages and salaries

Gross annual wages and salaries are the remunerations paid regularly to the employees by the employers before the deduction of any tax and social security contributions payable by the employees and withheld by the employers.

The average annual gross wages and salaries are calculated through dividing the total amount of wage and salary costs accrued during the reference year by the average annual number of employees under labour contract excluding those on maternity leave.

IV. EDUCATION

Types of educational institutions

Educational institutions are those institutions, which directly perform training according to educational programmes with students in organized classes (groups) locally or through distance learning. Educational programs in those institutions include all educational stages and/or attainment of professional qualification level. Non-formal education and informal learning do not come into the scope of the educational system, according to the definitions of ISCED 2011.

Since 2021/2022 school year, the National Statistical Institute (NSI) has started using administrative data for the primary and school education, and since 2023/2024 - also for the tertiary education. Data on primary and school education come from the National Electronic System for Preschool and School education, while data on tertiary education come from Register of all Active, Interrupted and Graduated Students and Doctoral Students, maintained by the National Center for Information and Documentation (NACID). Both systems operate under the authority of the Ministry of Education and Science (MES).

Types of educational institutions:

- Kindergartens;
- Schools¹ (I - XII grade): primary (I - IV grade), basic (I - VII grade), integrated (I - X grade), gymnasiums (VIII - XII grade), secondary (I - XII grade), vocational (art schools, sport schools, vocational gymnasiums providing training on programs for attainment of level of professional qualification);
- Vocational training centres providing training to persons aged 16 and over in vocational programmes against payment for acquisition of professional qualification, according to the Law on Vocational Education and Training;
- Vocational colleges carrying out training on programs with admission after completed secondary education;
- Higher schools - colleges, universities and equivalent higher schools. The statistical survey on tertiary education covers all higher schools accredited according to the Higher Education Act and up to 2021/2022 academic year incl. the private spiritual higher schools, opened under the regulation of the Religious Denominations Act.

¹ According to the Pre-school and School Education Act (promulgated SG No. 79 of 13 October 2015).

Students enrolled

The methodology of education statistics is built on the basis of the International Standard Classification of Education (ISCED), revision 2011, and the concomitant methodological guidelines:

- Pre-primary education in kindergartens and preparatory groups at schools (education level ISCED - 0);
- Primary and lower secondary stage of basic education and upper secondary education in all types of schools (education levels ISCED - 1, 2 and 3);
- Vocational education after upper secondary education in vocational colleges (education level ISCED - 4);
- Vocational training against payment for attainment of professional qualification level in centres for vocational training and schools (education levels ISCED - 2 and 3);
- Tertiary education for acquiring professional bachelor's, bachelor's and master's educational-qualification degrees from colleges, universities and equivalent higher schools (education levels ISCED - 6 and 7);
- Tertiary education for acquiring doctor's educational and scientific degree from universities, equivalent higher schools and scientific organizations (education level ISCED - 8).

Teaching staff

Teachers (teaching staff) are officials who directly conduct the training sessions according to the curricula irrespective of whether they are full-time or part-time employees.

The management personnel include officials performing managerial functions at the level of the educational institution - principals, assistant principals with teaching responsibilities.

The number of the teaching staff includes teachers and management personnel with teaching activity.

Pre-primary education

The kindergartens and preparatory groups at schools cover children aged 3 - 6 years.

Figure 3. Children in pre-primary education

Vocational training

The training for attainment of a level professional qualification is conducted in vocational classes.

The number of graduates includes students who successfully passed the exams and received certificates for a level of professional qualification.

The distribution of students and graduates in programmes for acquiring all the levels of professional qualification by narrow fields of education is presented according to the List of professions for vocational education and training.

Secondary education graduates who have attained second or third level of professional qualification are eligible to continue their education in higher schools or to start work in the acquired occupation (specialty).

Vocational training - IV level

The vocational colleges provide vocational training for acquisition of forth level of professional qualification with duration of up to two years. They enrol students with completed upper secondary education.

Tertiary education

Students are persons enrolled in an educational program of formal tertiary education according to ISCED irrespective of the mode of attendance. Formal education includes the educational programmes implemented in the legitimate educational institutions created in compliance with the existing legal order.

The NSI reports annually the number of students enrolled by counting the students themselves and not by counting the number of enrolments. For example, according to the current national methodology, students are counted only once in the cases of simultaneous enrolment in two specialties within one higher school.

Graduates with minimal duration of studies of 4 years according to the curriculum are awarded bachelor's degree; master's degree is awarded to graduates with minimal duration of studies of 5 years or at least one year of studies after the acquisition of bachelor's degree.

Professional bachelor's degree is a degree of tertiary professional education. It is awarded after the completion of professional training at college with minimal duration of studies of 3 years.

Doctor's educational and scientific degree is awarded by a Scientific Jury, according to the Law on Development of Academic Staff in the Republic of Bulgaria after minimum 3 years of studies and the successful defence of a doctoral dissertation.

Schools, teaching staff and pupils by district

The 'district' administrative and territorial units are presented in accordance with the Territorial Organization Act of the Republic of Bulgaria, which entered into force on 5 February 1999 (28 districts), while the territorial units for statistical purposes 'statistical zones' and 'statistical regions' are presented according to the Classification of Territorial Units for Statistical Purposes in Bulgaria. This classification complies with the NUTS classification of Eurostat.

Coverage rate of education system and education expenditure

The 'group net enrolment rate' indicator aims at showing the extent of coverage of the education system among population belonging to a specific age group corresponding to a given education level.

12. Group net enrolment rates¹ of the population in the education system by levels of ISCED 2011

	(Per cent)			
	2021/22 ²	2022/23	2023/24 ³	2024/25
Pre-primary education (ISCED - 0)	86.4	87.3	87.9	88.6
Primary education (I - IV grade, ISCED - 1)	93.1	92.7	92.5	92.7
Lower secondary education (V - VII grade, ISCED - 2)	91.4	90.7	89.9	89.6
Upper secondary education (VIII - XII grade, ISCED - 3)	87.5	86.2	85.1	84.7
Post secondary non-tertiary (ISCED - 4)	0.02	0.04	0.03	0.04
Tertiary education (ISCED - 6, 7)	48.2	46.0	42.2	43.4

¹ Group net enrolment rates are calculated as a percentage of the number of enrolments by levels of education in age groups 3 - 6, 7 - 10, 11 - 13, 14 - 18, 19 - 20 and 19 - 23 years to the number of the population in the same age groups.

² Break in the time series for the preschool and school education due to a change of the data source and the reference date.

³ Break in the time series for the tertiary education data due to a change of the data source and the methodology.

V. CULTURE AND ART

Publishing

The national written cultural heritage is expressed in the books, pamphlets, newspapers, magazines, bulletins and periodical collections issued in the country. The statistical reporting for the issued products, gives the public an idea of the number of titles and their circulation by different classification groups.

Figure 1. Published titles

Performing arts and cinemas

The NSI observes the activities of theatres, operas, operettas and musical theatres, and those of music and dance formations (philharmonic orchestras, ensembles for folk songs and dances and orchestras), their audience capacity, attendance and number of performances.

Figure 3. [Attendances at theatres](#)

At the end of 2024 the number of cinemas in Bulgaria was 84, and the number of screens - 240 which was an increase of 3 and 15 respectively in comparison with 2023.

Museums and community clubs

The museum is a cultural and scientific organisation which searches, examines, conserves and makes available for public viewing cultural and natural evidential material with cognitive, educational and aesthetical purposes. The NSI observes all museums open to visits: historical, natural, archaeological, ethnographic museums, art galleries and other exhibitions.

The Community clubs are 'traditional self-governing Bulgarian cultural and educational associations in urban and village areas, which perform public cultural and educational tasks' (Art. 2. Para 1 of the Act on community clubs). NSI conducts the survey on the community clubs' activities every five years.

Libraries

Since 2002, the NSI has observed libraries with collection sizes above 200 thousand books. These are the biggest libraries in the country: the ‘St. St. Cyril and Methodius’ National Library, the regional libraries, some larger community club libraries, specialized libraries and libraries at institutions of higher education. At the end of 2024, the 49 libraries had 34 697 thousand library collections. The readers were 277 thousand. The books in libraries increased by 1.5% compared to the previous year.

Radio and television activities

During the period 2021 - 2024, the number of radio stations in Bulgaria decreased by three (74 in 2021 and 71 respectively in 2024). In 2024, the share of broadcast advertisements was 4.2% of all broadcasts.

The total duration of the broadcasts in 2024 increased by 3.7% compared to 2023. In 2024, the share of television advertising was 6.8% of all broadcasts.

VI. HEALTH

Health establishments and medical personnel

The health network includes in-patient and outpatient health establishments as well as other health establishments. Data are presented according to the status at the end of the year. Data on hospital beds include all de facto operating hospital beds as well as hospital beds temporary out of use for a period of less than six months. Hospital beds for temporary use are excluded.

When analyzing the health network data the following has to be taken into account: the number of health establishments and hospital beds has changed not only as a result of the opening or closure of establishments, but also because of the reorganization or merging of establishments.

At the end of 2024 there were 59 193 beds in all types of health establishments available in the country. Health establishments for hospital aid are hospitals, dermato-venereological centres, complex oncological centres, mental health centres. At the end of 2024 the number of health establishments for hospital aid was 341 with 56 061 beds.

There were 920 beds available per 100 thousand of the population in 2024 and 871 hospital beds per 100 thousand inhabitants.

The number of medical personnel (individuals working under basic labour contract) includes persons practicing at healthcare establishments regardless of their ownership and subordination. Data on medical specialists working outside of the country as well as on medical specialists practicing outside of the health establishments (for example, doctors working for the pharmaceutical industry) are excluded.

At the end of 2024, there were 30 149 practicing physicians and 7 784 dentists. The number of physicians and dentists per 10 thousand of the population at the end of 2024 was 46.8 physicians and 12.1 dentists.

The number and structure of the population at the end of each year are calculated on the basis of the previous year's data and the data on natural movements and migration of the population in the current year. The population estimate as of 31 December 2022 reflects the changes in population numbers and structure recorded in the Census 2021. In this regard, there is a break in the time series for all coefficients for 2022.

Figure 1. Beds per 100 000 of the population¹

² There is a break in the time series for all coefficients for 2022 - see the methodological notes.

Medical personnel by district

The peculiarities of healthcare services from a territorial point of view have to be taken into account during the analysis of data on health establishments and medical personnel. Depending on the specialization of medical activities, the health establishments serve the population of one or more municipalities, districts or of the entire country.

Indicators on the number of population per one physician and per one dentist are calculated based on the number of population at the end of the year. There is a break in the time series for all coefficients for 2022 due to the availability of a new population estimate based on 2021 Census data.

In total, for the country, there were 214 persons per one physician in 2024.

Compared to the country's average, this indicator is more favourable for the districts Pleven, Sofia (stolitsa), Plovdiv and Varna.

The highest number of population served by one physician is registered for the districts of Kardzhali (399 persons) and Razgrad (341).

Figure 2. Population per physician by district at the end of 2024

¹ There is a break in the time series for all coefficients for 2022 - see the methodological notes.

² The indicators for the country are calculated by taking into account the total number of physicians and dentists incl. those attached to other offices as well as practitioners working in individual or group practices under a contract with the National Health Insurance Fund in more than one district.

Registered cases of malignant neoplasms and active tuberculosis

The data on the registered cases of malignant neoplasms and active tuberculosis are collected on the basis of the annual statistical reports. The latter are produced according to the notifications issued by the specialized health establishments with respect to such cases.

Two indicators are calculated - the prevalence rate and the incidence rate. The prevalence rate is the ratio between the total number of registered cases (incl. cases registered during previous years) and the average population for the respective year. The Incidence rate is the ratio between the newly registered cases and the average population for the same period. There is a break in the time series for all coefficients for 2022 due to the availability of a new population estimate based on 2021 Census data.

The number of registered cases had increased from 4 356 in 2021 to 4 646 in 2024 per 100 thousand of the population. The number of the newly registered cases was 385 per 100 thousand of the population.

The prevalence rate for the malignant neoplasms for children up to 17 years of age is 101 registered cases per 100 thousand children. The incidence rate per 100 thousand children of the respective age group is 4.

In 2024 the prevalence rate for active tuberculosis was 38 per 100 thousand of the population. The incidence rate is 14 per 100 thousand of the population.

The prevalence rate for the children up to 17 and incidence rate is 6 and 2 per 100 thousand children.

VII. HOUSEHOLD INCOME, EXPENDITURE AND CONSUMPTION

Total income, total expenditure, consumption of basic foods and purchasing power of the households are calculated on the basis of a quarterly representative survey of a random (stochastic) sample of 3 060 households held by NSI.

Total household income

Total income includes all monetary income as well as income in kind with a known value, irrespective of their source

Figure 1. Structure of total household income by source

Poverty indicators

The survey on income and living conditions is considered as the main source of statistical data on incomes and social inclusion along with the common indicators. To calculate indicators of poverty and social inclusion total disposable (net) income per equivalent unit is used. Equivalent scales are used because of the different composition and number of persons in the households. The modified OECD scale is used according to which the first adult aged 14 and more receives weight 1.0, the second adult aged 14 and more receives weight 0.5 and every child aged less than 14 receives weight 0.3. The weights are assigned to every household member and then are summed up so that an equivalent size of the household is obtained. Total disposable (net) income for every household is divided by its equivalent size and thus a net total disposable income per equivalent unit is formed. Data on poverty level show the share of poor people under the poverty line. The last is defined as 60% of the median equivalent disposable income.

VIII. CRIMINALITY AND JUSTICE

Crimes with penalty inflicted

Statistical data on crimes with penalty inflicted and persons convicted are based on the annual data and cover the activity of district, regional and military courts within the territory of the country on penal trials of a general, private and administrative nature. The number of crimes includes the information from penal trials with sentence that has come into force during the reference year. Crimes with penalties inflicted include proceedings that finished with conditional or effective sentence irrespective of the number of perpetrators. A crime committed by more than one person (in complicity) is counted as crime with penalty inflicted when at least one of the accused persons is effective or conditional convicted. When a crime is committed by more than one person, it is reported only once. Crimes committed abroad which are under the jurisdiction of courts in the Republic of Bulgaria are included in the total number of crimes.

Sources of the data on crimes with penalty inflicted are NSI's statistical survey and an administrative source - the Unified Information System for Counteraction to Criminality, maintained by the Administration of the Prosecutor's Office of the Republic of Bulgaria. According to NSI's final data, the number of convicted crimes in 2024 is 23 831.

¹ According to the sentences into force.

Persons convicted

The number of persons convicted during a certain year includes those with effective or conditional sentence which has come into force during the same year. In case there is convicted person for more than one committed crime in one proceeding, the most severe punishment is counted. If a person is convicted for several crimes, the person is counted as the most serious punishable offence and each crime separately according to the respective type of crime. The number of persons convicted does not coincide with the actual number, as during the calendar year, a person may be convicted more than once. The age of persons convicted is in completed years by the date of commitment of the crime. Persons, who have completed 14 years of age, but not 18 years, are considered juveniles. Persons who have completed 14 years of age are considered to be penalty responsible.

In accordance with NSI's final data the number of persons convicted in 2024 is 21 821.

IX. NATIONAL ACCOUNTS

Gross domestic product

The national accounts of Bulgaria are compiled in accordance with the main methodological recommendations of the documents ‘European System of Accounts, 2010’ (ESA 2010) issued by Eurostat and the ‘System of National Accounts, 2008’ (SNA 2008), a joint issue of the UN, OECD, Eurostat, IMF and the World Bank. The main macroeconomic indicator of the System of National Accounts is Gross Domestic Product (GDP).

GDP estimates are an indicator for the trends in the development of the respective economy and they can be treated as an indicator for the economic policies at the macroeconomic level.

Gross domestic product represents a balanced estimate of the data performed by using the following three approaches:

- Production approach (output approach);
- Final expenditures approach;
- Income approach.

Every approach is based on different economic aggregates, which, put together, represent a generalization of the logical interrelations within the system of national accounts. A fundamental requirement of the system is the independence of the three different estimates, i.e. every component of GDP calculated according to the different approaches should be estimated independently and on its own.

Gross Domestic Product	139602	168360	185233	202861

Gross value added

Gross domestic product (GDP) is calculated along the production approach as the sum of the gross value added at basic prices for the economy as a whole and of the adjustments, which include net taxes on products (taxes less subsidies), value added tax and import duties. On its own, the gross value added is a balancing item of the 'Output' account and determines the result of the production process as the difference between gross output and the goods and services used in this process, that is, the intermediate consumption.

Output (at basic prices) is the value of produced goods and services resulting from the production activity of resident units during the relevant period.

Intermediate consumption includes the value of all goods and services, transformed or entirely used up in the production process during the corresponding period except for the consumption of fixed assets, recorded as consumption of fixed capital (amortization).

Gross Domestic Product	107.8	104.0	101.9	102.8

Compensation of employees and gross operating surplus/gross mixed income

The income approach is compiled simultaneously with the production approach for GDP estimation; it characterizes the activity in which the primary incomes of the participants in the production process originate. According to the income approach for GDP estimation, GDP consists of the compensation of the employees, of the net taxes on production and imports, and of the gross operating surplus/gross mixed income and adjustments.

The compensation of the employees includes the total remuneration, in cash or in kind, paid by the employer to the employees in return for work done by the latter during the accounting period, including the social and health insurance contributions payable by the employer according to the national labour legislation.

Other net taxes on production and imports (taxes minus subsidies) are included as a component of the value added by economic sectors and represent output related unrequited payments of the employers to the state budget less the production subsidies granted by the state budget to the economic units.

Gross operating surplus/gross mixed income is a balancing item for the income approach. It is a measure of the results achieved by the production activities of the economic units. The gross operating surplus is calculated as the difference between the gross value added, the compensation of the employees, and the net taxes on production and imports.

GDP at market prices	139602	168360	185233	202861

Investments and consumption

According to the final expenditure approach, GDP is calculated as a sum of individual consumption, collective consumption, gross fixed capital formation, changes in inventories and the net exports of goods and services.

Individual household consumption consists of final household consumption expenditure, government final consumption expenditure for the provision of individual services to households and final consumption expenditure of the non-profit institutions serving households.

Collective consumption is measured by the final consumption expenditure of government on collective services provided to society as a whole.

Gross fixed capital formation includes expenditure on acquisition of fixed non-financial assets, including the increase of uncompleted construction less revenues from sales of existing fixed assets.

Changes in inventories include the change in materials and supplies, work-in-progress, finished goods and goods for resale in the enterprises, as well as the changes of households inventories resulting from their unincorporated activity.

Net exports of goods and services (exports minus imports of goods and services) as a final use GDP component represents the difference between the values of the exports and imports of goods and services. Exports and imports are valued at F.O.B. prices.

Labour productivity

Labour productivity is a compound economic indicator, which compares the accomplished result (the newly created product) with the labour input used in a given economic activity within a certain economic area during a specified period of time. The main components of labour productivity are indicators measuring the result of the performed productive activity (as a numerator), and indicators related to the labour input in the production process (as a denominator).

For the purposes of international comparisons, GDP is the preferred measure for the labour productivity of the various national economies.

Using GVA is appropriate for estimating labour productivity at the national level as well as at the production activity level.

X. FINANCE

Monetary aggregates

Money supply comprises liabilities with money character of monetary financial institutions (MFIs) to the resident sectors with exception of the liabilities to the Central government sector and the Monetary financial institutions sector. It is measured using the following monetary aggregates: M1, M2 and M3.

The monetary aggregate M1 - 'narrow money' - includes the most liquid instruments used in settlements (currency outside the MFIs and overnight deposits in national and foreign currency).

The 'Currency outside monetary financial institutions' indicator represents currency in circulation less cash in BGN held by other monetary financial institutions.

Overnight deposits include deposits without an agreed maturity, which are immediately convertible into currency or transferable on demand through banker's order or by cheque without significant restrictions or penalties. One-day deposits and also transferable deposits are included in this item. Transferable saving deposits are included in transferable deposits.

The monetary aggregate M2 includes monetary aggregate M1 and quasi-money.

Quasi-money comprise deposits with agreed maturity of up to two years and deposits redeemable at notice (incl. non-transferable savings deposits) up to three months. Deposits with agreed maturity are not immediately available as they have an agreed term prior to withdrawal. Received loans are also included under this category. Deposits redeemable at notice include non-transferable savings deposits and other deposits redeemable at notice.

The monetary aggregate M3 (broad money) includes monetary aggregate M2 and marketable instruments.

Marketable instruments consist of repos, money market funds shares/units and debt securities issued up to two years.

Claims of the monetary financial institutions on the government and non-government sectors

Claims of the monetary financial institutions on government and non-government sectors represent domestic credit, which is part of net domestic assets included in the Monetary survey. It is part of the monthly monetary statistics published by the Bulgarian National Bank.

Domestic credit covers credit to the consolidated general government sector (net claims on the central government sector, and gross claims on sectors local government and social security funds) and credit to the non-government sector (gross claims on non-financial corporations, financial corporations, households and NPISHs).

Interest rates

Interest rates refer to BGN denominated instruments. They are average weighted with the respective volumes, except for the base interest rate and the long-term interest rate (LTIR) for convergence assessment purposes, which are calculated as simple average values.

Yield on long-term government securities is the average weighted effective yield to maturity on individual transactions in interest-bearing government securities on the secondary market during the reporting period. The yield is calculated using the ISMA formula at ACT/365 day count convention. The securities are grouped by their original maturity.

The long-term interest rate for convergence assessment purposes is determined on the basis of the secondary market yield to maturity of a long-term government bond (benchmark bond) issued by the Ministry of Finance and denominated in national currency.

The annual effective interest rates are average weighted with the new business volumes throughout the reporting period or the outstanding amounts as of the end of the reporting period. These are the interest rates applied by the banks on loans and deposits vis-a-vis resident 'Non-financial corporations' and 'Households and NPISHs' sectors.

The annual percentage rate of charge comprises all interest payments on a loan, as well as all fees, commissions and other charges a client has to pay in order to obtain the loan. It is calculated for consumer loans and loans for house purchases only.

² The interest rates are on BGN instruments.

³ Effective annual rates applied by banks on loans and deposits vis-a-vis Non-financial corporations and Households and Non-profit institutions serving households (NPISHs) sectors.

⁴ The interest rates on new business and on outstanding amounts coincide.

Deposits and loans of Households and NPISHs sector

Deposits are funds accepted by the monetary financial institutions and can be payable at sight, without any notice, upon notice or under other previously agreed payment conditions. Deposits are accepted upon agreement between the parties concerning the terms and conditions for the keeping of the deposit accounts, the interest rate, the time of repayment and the penalties for the parties in case of failure to perform their obligations. The deposits are liabilities of financial institutions.

Deposits with agreed maturity are not immediately available as they have an agreed term or other restriction on withdrawal. These deposits cannot be used for payment purposes and are not convertible into cash money prior to maturity without significant restrictions or penalties. Received loans are also included under this category.

Deposits redeemable at notice include non-transferable savings deposits and other deposits redeemable at notice. Savings deposits are non-transferable deposits without specified maturity used for safekeeping the funds of households against issuance of a personal savings book or an analogous document. These include deposits on house purchase, children's deposits and other deposits. Other deposits redeemable at notice are non-transferable deposits without a specified maturity, which cannot be converted into currency without any notice. Their conversion into cash is not possible or they can be converted into cash prior to the term of the notice but by imposing a sanction. Non-transferable deposits with specified maturity which can be converted into cash prior to maturity only at notice are also included.

Figure 5. Annual change of deposits and loans of Households and NPISHs sector

Loans are financial assets created to provide borrowers with funds, goods, or services. Terms and conditions of loans (fixed by the creditor or negotiated) are usually evidenced by a non-transferable document. A loan is an unconditional debt which has to be repaid upon maturity and which generates income in the form of interest. Margin deposits made by the reporting agents are also included in the 'Financial corporations' sector.

Overdrafts represent debit balances on current accounts. Repayment is automatic upon receipt of funds in the respective current account. Both overdrafts with pre-agreed interest terms and amounts and without pre-agreed terms are included.

Consumer loans - loans granted for the purchase of goods and services for personal use by households.

Loans for house purchases - loans extended to households for the purpose of investing in housing for own use or rental, including building and home improvements.

Other loans - all other loans extended to households, including loans for education and medical treatment. Loans for commercial or production purposes and loans to NPISHs are also included in the indicator.

² The indicator includes data on overnight deposits, deposits with agreed maturity up to 2 years and deposits redeemable at notice up to 3 months.

³ The indicator includes data on overdraft, consumer loans, loans for house purchases and other loans.

XI. PRICES

Consumer price indices

The consumer price index is an official measure of the inflation in the Republic of Bulgaria. It measures the total relative price change of goods and services used by households for private (non-production) consumption and it is calculated by applying the structure of the final monetary consumption expenditures of the Bulgarian households. The main source of information concerning the expenditures is the Households budget survey in the country. The CPI in year t is calculated with structure of expenditures for year $t - 1$.

The chain consumer price indices measure the price change in the current month compared to the previous month. The chain consumer price indices are used as a measure of **monthly inflation**.

The 12-month consumer price indices measure the price change between the current month and the same month of the previous year. The 12-month consumer price indices are used as a measure of **annual inflation**.

Consumer price indices over December of the previous year measure the accumulated changes in the prices of the current month with respect to December of the previous year. Consumer price indices over December of the previous year have been used as measures of the **inflation since the beginning of the year**. In December each year, the 12-month index is equal to the consumer price index over December of the previous year.

The annual average consumer price indices measure the average price change during the 12 months of the current year compared to the average price change during the 12 months of the previous year. The annual average consumer price indices are used as a measure of the **annual average inflation**.

Harmonized index of consumer prices

The Harmonized Index of Consumer Prices is the comparable measure of inflation across EU Member states. It is one of the criteria of price stability and for the readiness of Bulgaria to join the euro-zone.

HICP, just as CPI, measures the total relative price change of goods and services. Both indices are calculated using the same basket of goods and services, but differ with respect to the used weights. HICP is calculated through the use of weights, which reflect the individual and the collective consumption of all households (incl. institutional and foreign households) on the economic territory of the country. The main source of information for HICP weights is the national accounts data. HICP in year t is calculated with the weights of year t-2.

In compliance with Regulation (EC) No. 2016/792 **the base year for HICP is 2015** and all indices have been calculated and published at **2015 as a base year**.

Industrial producer price indices on the domestic market

The industrial producer price indices on the domestic market measure the average price changes of industrial products produced by industrial enterprises and sold on the domestic market, on the basis of a permanent sample of enterprises and products. Surveyed prices do not include VAT, excises and subsidies.

Information for calculation of PPI is received on the basis of monthly surveys on producer prices of industrial products, where the prices of specific products with equal quality in the two surveyed time periods are compared and also in case of quality change of the surveyed specific products this quality change is taken into account.

Price indexes are calculated at fixed base year, where indexes at different level of detail are calculated as weighted average though ascending weighing system, following the structure of the Classification of Economic Activities (NACE.BG 2008).

Producer prices indices in agriculture

The survey of producer prices in agriculture is carried out in accordance with the main requirements of the Eurostat agricultural price statistics methodology (i.e., the Handbook of Agricultural Price Statistics).

The survey is based on samples and is carried out quarterly.

The object of the survey is the producer price of a defined specific product. This is the price of the largest purchase or sale, in terms of quantity, during the respective month of the reference period. In the case of daily purchases or sales, the price in the middle of the month is recorded.

The producer's price is the output price of the agricultural farm, i.e., this price excludes expenditures for delivery, storage, transportation and the other expenditures arising from selling or purchasing agricultural products. This price does not include the product subsidies received (if such subsidies exist), VAT and other paid taxes.

On the basis of the collected information on agricultural producer prices, the producer price indices are calculated, using as a base (100) the year 2020, as well as the preceding year.

Price indices of goods and services, currently consumed in agriculture

The survey of the prices of goods and services, currently consumed in agriculture is carried out in accordance with the main requirements of the Eurostat agricultural price statistics methodology (The Handbook of Agricultural Price Statistics). Five surveys on prices of fertilizers, animal feeding stuffs, plant protection products, veterinary-medical products and seeds and planting stock are carried out.

The surveys are based on samples and are carried out quarterly.

The objects of the surveys are the purchasing prices of the surveyed goods and services, currently consumed in agriculture.

The surveyed unit price is the price at the input of the agricultural farm, i.e., the price, which the purchaser has actually paid for the goods. This price includes taxes and levies and excludes subsidies and deductible VAT.

Based on the information from the five surveys, as well as on the information from other surveys conducted by NSI, the common price index of the goods and services, currently used in agriculture, is calculated using as a base (100) the year 2020, as well as the preceding year.

Price indices of goods and services contributing to agricultural investment

In order to calculate the price indices of goods and services contributing to agricultural investment using as a base (100) the year 2020, as well as the preceding year, are used the calculated:

- Quarterly indices for import of agricultural machinery and transport equipment from the 'Foreign trade statistics' department;
- Monthly indices in building construction from the 'Business trends and tourism' department.

XII. EXPORTS AND IMPORTS OF GOODS

Foreign trade turnover

The indicators, which describe the foreign trade turnover of the Republic of Bulgaria are based on the following data: the Single Administrative Document for exports and imports with third countries; the monthly surveys of the Intra-EU exports and Intra-EU imports of the providers of statistical information on the values for trade between EU Member States; the statistical adjustments for non-response and intra-Union trade under the thresholds; additional statistical information from other administrative sources.

The main trading partner of Bulgaria, during the recent years is EU - over half of the country's foreign trade is carried out with the Member States.

XIII. BALANCE OF PAYMENTS

Balance of payments

The Balance of payments (standard presentation) is in accordance with the Sixth edition of the 'Balance of Payments and International Investment Position Manual' (IMF, 2009) and the 'Guidelines of the European Central Bank'. The components of the standard presentation of the balance of payments are classified in the following main categories:

Current Account - comprises the acquisition and provision of goods and services, primary and secondary income between residents and non-residents.

Capital Account - shows (1) capital transfers receivable and payable between residents and non-residents; and (2) the acquisition and disposal of non-produced nonfinancial assets between residents and non-residents.

Financial Account - records all transactions that involve financial assets and liabilities and that take place between residents and non-residents.

Net errors and omissions is an offsetting item.

Net errors and Omissions ⁷	3050.6	3872.2	323.7	-584.0

¹ Standard presentation in accordance with IMF 6-th edition of the "Balance of Payments and International Investment Position Manual". Preliminary data as of March 21, 2025.

² Preliminary NSI and BNB data for 2023 and 2024. The data are based on the balance of payments compilation methodology.

³ A minus sign denotes a capital outflow (decrease in assets or liabilities) and a positive sign - a capital inflow (increase in assets or liabilities).

⁴ Preliminary data compiled in accordance with the asset/liability principle. Data are provided by direct investment companies reporting to BNB, banks, the Central Depository, notaries, the NSI, the Public Enterprises and Control Agency. The 2024 data are subject to revisions with the annual NSI data and reports from foreign direct investment enterprises.

⁵ Based on data provided by banks, nonbank financial institutions, insurance companies and pension funds, general government institutions, and nonfinancial corporations acquiring securities without intermediation of a resident investment intermediary.

⁶ Excluding valuation changes due to the exchange rate or price changes, changes associated with the creation of reserve assets (monetization/demonetization of gold and the allocation or cancellation of SDRs) and reclassifications. A positive sign (+) denotes an increase in the reserves, a minus sign (-) - a decrease.

⁷ Net errors and omissions represent the difference between the Financial account balance and Current and Capital account balance.

Foreign direct investments

Foreign direct investment in the country is an international investment in which a direct investor, resident of a foreign economy, obtains a lasting interest in an enterprise resident of the Bulgarian economy (direct investment enterprise). The lasting interest of the direct investor in a long-term relationship with the direct investment enterprise implies a significant degree of influence by the direct investor on the management of the direct investment enterprise. For the purposes of international compatibility of the data of the separate countries, the Balance of Payments Manual has adopted the principle that the acquisition of 10 or more percents of the voting power in the management of an enterprise is considered an establishment of a direct investment relationship.

The foreign direct investment comprises the initial transaction establishing the relationship between the direct investor and the direct investment enterprise, as well as all subsequent transactions between them. The transactions can be related to increase/decrease in the liabilities of the direct investment enterprise to its direct investor, as well as to increase/decrease in the claims of the direct investment enterprise on the direct investor.

Acquired tangible fixed assets

The acquired tangible fixed assets include the value of all acquired tangible fixed assets, irrespective of the manner of their acquisition (construction or purchase). The tangible fixed assets acquired by construction are reported after their putting into operation according to Ordinance No. 2/31.07.2003 of the Ministry of Regional Development and Public Works.

The data about acquired tangible fixed assets are shown at current prices.

**XV. DOMESTIC TRADE;
ACCOMMODATION AND
FOOD SERVICE ACTIVITIES**

Retail sales premises

The number of 'Shops' comprises shops and pavilions of the stationary trade network with trade rooms for serving customers. The number of 'Petrol stations' and 'Gas stations' is not included in the number of shops. The retail sales shops are classified according to the predominant kind of goods offered.

In 2023, a reduction in the total number of shops was registered. In comparison with 2022, the number of shops decreased as for 'Foods, beverages and tobacco' as well as for 'Durable and other consumer goods' by 4.5% and 1.8%, respectively.

1. Retail sales premises as of 31.12.

Kind of premises	In numbers			Change - % (Preceding year = 100)	
	2021	2022	2023	2022	2023

Petrol stations	2481	2495	2515	0.6	0.8
Gas stations	301	310	307	3.0	-1.0

Turnover in domestic trade, accommodation and food service activities

The indicator refers only to the economic subjects classified in accordance with the National Classification of Economic Activities (NACE.BG - 2008) in section G - 'Wholesale and retail trade; repair of motor vehicles and motorcycles' and section I 'Accommodation and food service activities'. The turnover includes all revenues invoiced during the reported period for delivery of products, goods or services, including the accrued excises.

The turnover indices are calculated for all groups of trade activities as defined in Regulation (EC) No. 1893/2006 and reflect the turnover changes between two consecutive years' constant prices. They are calculated on the base of 2021 average annual prices and are chain-linked and comparable in coverage. The price impact is eliminated by deflation of the turnover through use of the consumer prices' indices and the producer prices' indices, regrouped according to the content of the relevant activity groups.

According to the preliminary data in 2024 the turnover in section 'Wholesale and retail trade; repair of motor vehicles and motorcycles' declined by 4.2% compared to the previous year. In the 'Retail trade, except of motor vehicles and motorcycles', the general decrease was 0.3%. In the 'Wholesale trade, except of motor vehicles and motorcycles', the drop of 7.1% determined the magnitude of the overall index, as the activity formed about 70% of the turnover volume in the trade sector. A decline was observed in 'Wholesale and retail trade and repair of motor vehicles and motorcycles' - by 8.8%.

The turnover at constant prices in section 'Accommodation and food service activities' in 2024 ran up by 6.1% compared to 2023. A decrease was observed in the 'Food and beverage service activities' - by 1.5%, while the 'Accommodation' was noted a growth - by 16.2%.

XVI. INDUSTRY

Production value of industrial enterprises

The ‘Industry’ comprises the activity of industrial enterprises, classified in the mining and quarrying industry, manufacturing, electricity, gas, steam and air conditioning supply and water supply, sewerage, waste management and remediation activities.

The indicator ‘Production value of industrial enterprises’ refers to the entire of the industrial enterprises, i.e., it includes receipts from their non-industrial activities. The production value comprises the following elements: receipts from sales of industrial production and services expenditure on acquisition of tangible fixed assets on own account of the enterprises, other receipts, changes in stocks of finished goods and changes in stocks of work-in-progress.

All data in value terms are published at current prices.

Manufacture of furniture; other manufacturing; repair and installation of machinery and equipment	4895944	5099367	7084051
Electricity, gas, steam and air conditioning supply	22617058	12614347	21897384
Water supply, sewerage, waste management and remediation	2329843	2483852	3470472

Structure of the production value of industrial enterprises

The structures (relative shares) are calculated at current prices. A change in the contribution of the main industrial activities in the volume of production is observed. The shares of electricity, gas, steam and air conditioning supply, shares of the manufacture of furniture; other manufacturing; repair and installation of machinery and equipment increased, while a decrease was observed in the shares of manufacture of transport equipment; manufacture of electrical equipment and manufacture of food products, beverages and tobacco products.

Indices of industrial production, calendar-adjusted

The Industrial Production Index is calculated on the basis of the calendar-adjusted monthly indicator ‘Industrial Production Index’. It is based on sample survey. As of July 2024, the indices were recalculated using 2021 as the new base year, which necessitated the replacement of the previously published indices for 2022 and 2023.

4. Production value indices of industrial enterprises

	(Preceding year = 100)		
	2022	2023	2024
Total	113.30	103.85	99.92

Manufacture of furniture; other manufacturing; repair and installation of machinery and equipment	116.6	106.0	98.3
Electricity, gas, steam and air conditioning supply	116.2	83.4	79.8
Water supply, sewerage, waste management and remediation	100.0	94.6	99.6

Industrial products in kind

The annual statistical survey on industrial products in kind is conducted on the basis of the National Nomenclature of Industrial Production (PRODCOM.BG), which is identical to the European Nomenclature of Industrial Products (PRODCOM List) and ensures comparability with EU industrial products. Information is collected according to the methodology of the statistical survey for all PRODCOM.BG headings for which it is known that production exists, on the basis of a representative sample of industrial enterprises and non-industrial ones whose secondary activity is industrial.

The data on the output of industrial products in kind (Table 6) comprises total production in volume terms for the respective reference year, including industrial products manufactured on the sub-contracting basis, and intermediate consumption of the enterprises (any production by the enterprise which is incorporated into the manufacture of other products).

Due to the specific character of the survey, published data are subject to continuous review and updating to improve the quality of the disseminated data.

XVII. CONSTRUCTION AND HOUSING FUND

Production of enterprises in construction

Data on the production of enterprises in the construction are shown at current prices.

The enterprises are classified by economic activity grouping according to the Classification of Economic Activities (NACE. BG - 2008), where they are divided as follows: Construction of buildings, Civil engineering and Specialized construction activities.

According to the Eurostat Regulations from 2021, the production value (value of output) does not include the charged excise duties and other operating income, but includes the income from product- or turnover-related subsidies from state support.

Figure 1. *Structure of production of construction enterprises*

Specialized construction activities	4860926	5754703	7440546	6724721

Housing fund

Data about the housing fund as of the end of 2024 is calculated on the basis of the results of the Census of the housing fund as of 7th September 2021, and accumulation of the number of new constructed residential buildings and deduction of the number of destroyed residential buildings during the period 7.09.2021 - 31.12.2024 year.

Residential buildings are the buildings which by initial building or after reconstruction are suitable for living and consist of one or more dwellings that take at least 60% of the total area. In the coverage of the survey 'Housing fund at the end of the year' are included inhabited and uninhabited residential buildings, campuses and buildings of institutional households.

Steel-concrete buildings are those of which the carrier and the floor constructions are built of steel-concrete and the walls are made of panels, brick masonry or other materials.

Solid structures are those of which the carrier walls are of brick and stone masonry and the belts, the beams and the floor construction are made of steel-concrete but have no steel-concrete columns. The buildings whose the floor elements are precast reinforced concrete units also refer to the solid structures.

In the group of 'other buildings' are included the structures that are built of stones, sun-dried brick, wood and other materials.

Permits issued for buildings and dwellings completed

Data about building permits issued for construction are collected from quarterly statistical surveys of NSI, which ensure information about building permits issued for construction of new buildings for the type of buildings and the gross building area by municipal authorities.

Type of buildings is classified according to the Classification of types of construction (CC) and is divided into:

- Residential - buildings, the useful floor area of which is mostly used for permanent residential habitation.
- Non-residential - buildings for various purposes, including:
 - administrative - offices and buildings for administrative work of departments and other organizations and associations (representative buildings - banks, post offices, government department offices, conference and congress centres, court-of-law, municipal halls, etc.);
 - other buildings - buildings used for different activities: production, trade, transport, education, cultural purposes, sports, agriculture, health, recreation and facilities for short accommodation (hotels, motels, rest houses, huts and others).

The gross building area is the sum of all floors areas according to their external dimensions.

In the scope of the survey were the newly built residential buildings with an approved record of handover Form 16 or a valid usage license according to Regulation № 2/31.07.2003 of the Ministry of Regional Development and Public Works.

Living floor space includes the space of the rooms and kitchens over 4 sq. m. floor area. The space of the kitchens with over 4 sq. m floor area was presented separately before 31.12.2018.

A room is defined as a space in the dwelling enclosed by walls reaching from the floor to the ceiling or roof, of a size large enough to hold a bed for an adult (4 sq. metres at least) and at least 2 metres high over the major area of the ceiling.

Service floor space is the floor area of the rooms and kitchens with less than 4 square meters of floor area, vestibules with a portal or another screen, corridors, bathrooms, toilets, larders, hanging closets, other service rooms such as drying-rooms, laundries or balconies regardless of their space.

The useful floor space of the dwelling is the sum of the living floor space and the service floor space.

XVIII. ENERGY

Overall energy balance

The overall energy balance (OEB) is an aggregate of the energy balances of all energy products consumed in the country, in an unified unit of measurement. It consists of the following indicators:

Primary energy production represents any kind of extraction of energy products from natural sources on the territory of the country. Includes coal production (purified production is reported), crude oil, natural gas, nuclear energy, renewable energy (water, wind, solar, geothermal and heat from the environment), biomass, biogas, liquid biofuels and non-renewable fuels. Since 2019, it has comprised also primary heat production, which is calculated by estimation of the quantities of electricity and heat produced from 'heat from chemical processes' and efficiency of the production process.

Recovered and recycled products refer to slurry and shale from coal recovered from mines as well as to lubricants used for petroleum products, which are processed.

Imports (incl. Intra-Union imports) and *exports* (incl. Intra-Union exports) include the quantities passed through the political boundaries of the country, whether customs clearance has taken place or not. Transit is not reported (excluding electricity). Only energy products, produced in the country, are reported as exports in the energy balance.

Stock change is the difference between stocks at the beginning and at the end of the year in producers, large trading companies and consumers.

Gross available energy is calculated from *primary energy production* + *recovered and recycled products* + *imports* - *exports* + *stock change*. Shows the amount of energy, required to meet energy demand in the country.

International maritime bunkers are the quantities of fuels delivered to ships of all flags that are engaged in international navigation. The international navigation may take place at sea, on inland lakes and waterways, and in coastal waters (port of departure and port of arrival are in different countries).

Gross inland consumption is calculated as *Gross Available Energy* minus the *International maritime bunkers*.

International aviation are quantities of fuels delivered to aircrafts for international flights. The domestic/international split is determined based on departure and landing locations and not by the nationality of the airline.

Total energy supply represents the amount of energy required to meet domestic consumption in the country. For secondary products derived from a transformation process, the data may be a negative number.

Transformation input are fuels and energy used to produce other energy products.

Transformation output are the quantities of the secondary energy products derived from different transformation processes: production of electricity and heat, briquetting, coke and blast furnace, production of petroleum products. The total heat production of main activity producer plants and the produced heat sold to third parties by Autoproducer plants are reported.

Consumption of the energy sector reflects final consumption of energy and fuels (not transformed in other energy products) for the implementation and maintenance of the main activity of companies producing energy products.

Distribution losses includes losses in gas and heat transmission and distribution, electricity transmission and distribution and transport of other fuels.

Available for final consumption are the quantities of energy products available for final use. This indicator is calculated as: *Total energy supply* – *Transformation input* + *Transformation output* – *Energy Sector Consumption* – *Distribution losses*.

There are two types of final consumption: non-energy and energy consumption.

Final non-energy consumption shows the quantities of fuels used as raw materials for the production of non-fuel products.

Final energy consumption contains data for consumed energy products, which are not transformed into others. The quantities of fuel consumed in the Autoproducer plants for the production of heat, used for inner plants' activities, are reported as final energy consumption by the relevant sector of economic activity.

Statistical difference is the difference between *Available for final consumption* and *Final consumption* (non-energy and energy).

The information on the overall energy balance is presented in thousand tons of oil equivalent. The Joule and its multiples are used as common energy unit of measure in international practice. The conversion from one type of measure unit into another is effected by the following relation:

$$1 \text{ Gigajoule} = 278 \text{ kWh} = 0.023885 \text{ toe}$$

Electricity and heat

Electricity generation is the gross electricity generation which is the sum of the electric energy produced by all generating sets concerned (incl. pumped storage), measured at the output terminals of the main generators.

The gross electricity generation includes the electric energy, absorbed by the power plants own generating auxiliaries and the losses in the main generator transformers.

Heat production covers gross heat production by the public plants and only heat production by auto-producers which is sold to third parties.

The public plants (Main Activity Producers) report the gross heat produced by the installations. This is the heat produced by the installations, including own needs.

Auto-producers report the heat sold to third parties only. The production of heat used by a company for its main activity is not included.

The Available for final consumption is on the one hand: *Net production + Imports - Exports - Transformation input for electricity and heat generation (incl. Pumped storage) - Distribution losses*, and on the other hand: *Final energy consumption by sectors (Industry, Transport, Households, Agriculture, forestry and fishing, Commerce and public services, Energy sector, Not elsewhere specified - other) + Statistical differences*.

The electricity consumption by economic activities does not include the own needs of power plants, as it is reported in the consumption of Energy sector.

The available amount of heat for final consumption to be interpreted similarly.

XIX. TRANSPORT

Transport - main data on transport development

Transport is a branch in the national economy which comprises transport enterprises that provide services for hire or reward. According to the National classification of economic activities, this section includes all kinds of transport (railway, road, maritime, inland waterway, air, pipeline and urban electric transport).

The section consists of basic data characterizing the state and changes that occurred in the public and private sector.

The total length of the railway lines includes current road and station platforms. The current road covers the length of the railway lines between the stations' axes and the distance between the border stations and the state borders. The length of the double and the electrified railway lines is measured in one direction.

The international regular bus lines are included in the coach lines.

The route length of the trolleybus and electric bus lines, the tram network and the metro is a sum of the total one-way operational length of the lines. The length of the overlaying lines is reported only once.

The data source of registered freight vehicles and buses is the Security Police Service Department at the Ministry of Interior.

The number of trolleybuses, electric buses, trams and metro motorcars is related to the available vehicles owned by the urban electrical enterprises.

1. Basic transport data

Goods and passengers carried and transport performance

The main indicators characterizing transport activities are related to the carriage of goods and passengers via land, sea, air and urban electrical transport.

Land transport includes the transport activities by rail and road, as well as the carriage of goods by pipeline transport.

Data on freight land transport include the goods carried and the transport performance of railway, road and pipeline transport. The land passenger transport covers the number of passengers carried and the transport performance of railway and road transport.

The data on urban electrical transport include passengers carried and transport performance of the trolleybus transport in the country, tramway transport and metro in Sofia (the capital).

XX. TOURISM

Accommodation establishments

The methodology used in statistical surveys on tourism is in line with the Regulation No. 692/2011 of the European Parliament and of the Council concerning European statistics on tourism and Commission Regulation No. 1051/2011 implementing Regulation No 692/2011 of the European Parliament and of the Council concerning European statistics on tourism, with regards to the structure of the quality reports and the transmission of the data.

The object of the survey is all accommodation establishments in use with 10 or more bed-places - hotels, camping sites and other establishments for short-term accommodation (holiday settlements, hostels, guesthouses, bungalows, rest houses, mountain chalets, private rooms and flats, and other).

The observation of accommodation establishments collects various data by types of accommodation establishments, nights spent, arrivals in accommodation establishments, revenues from nights spent and others.

In 2024, there were 4 049 public and private accommodation establishments functioning in the country - hotels, motels, mountain chalets, camping sites and other establishments for short-term accommodation with 10 or more bed places.

¹ In use.

Nights spent

The total number of the nights spent in all accommodation establishments in 2024 was 27 646.2 thousand and increased by 781.2 thousand (2.9%) compared to 2023. The number of the nights spent by non-residents (15 058.0 thousand) in all accommodation establishments increased by 3.5% in 2024 compared to the previous year.

Almost all foreign citizens - 98.0%, preferred to spend the night in hotels while 2.0% of them spent nights in other accommodation establishments (camping sites, mountain chalets and other establishments for short-time accommodation).

The structure of the nights spent by non-residents in 2024 showed that the highest percentage of nights was spent in four and five-star accommodation establishments (77.4%), followed by those with three stars (16.2%) and those with one and two stars (6.4%).

Trips of Bulgarian residents abroad and arrivals of non-residents to Bulgaria

The statistical data on travel of Bulgarian residents abroad and on visits by non-residents in Bulgaria are developed on the basis of the monthly information received from the Ministry of the Interior and from a sample survey of the National Statistical Institute among Bulgarian and foreign citizens passing the border crossing control points.

The number of the trips of Bulgarian residents abroad during 2024 was 8 796.8 thousand, which is an increase of 7.9% compared to 2023.

In 2024, the number of visits from abroad to Bulgaria was 13 249.5 thousand, 45.7% of which were with other purpose, 43.7% with holiday and recreation purpose, and 10.6% with professional purpose. Compared to the previous year, the visits of foreign citizens to Bulgaria increased by 4.9%.

XXI. FORESTRY

Total forest area

The total forest area covers all wooded, non-wooded and non-timber producing areas.

The deciduous high-stemmed forests include trees of seedling origin, which are naturally and artificially established through afforestation by planting or seeding. The deciduous low-stemmed forests include the same species as the deciduous high-stemmed forests, but have shoots origin. The forests are managed through methods that preserve their biological variety and shoots regeneration (including the stands of *Robinia pseudoacacia*).

Wooded forest area is a land under natural or planted stands of trees and bushes that covers natural plantings, sparse forests and crops.

Data on afforestation are based on the inventory of forests.

Afforestation in mature non-regenerated forest is defined as afforestation carried out in a mature forest (at the age of the main cutting) for which natural regeneration is insufficient.

Afforestation of sparse forests is carried out on areas with small numbers of trees per unit of area.

Reforestation of crops is afforestation in artificially established forest areas up to 3 years old for the restoration of dry (lost) saplings.

Growing crops includes activities aiming at supporting the initial growth and the stability of the saplings up to 3 years old (cutting of shoots, digging, removing of competitive plants, etc.).

Management of the forests

Thinning and cleaning are regular cuttings in young and middle-aged plantations in order to regulate their species structure and to improve the growing conditions and the quality of timber production.

Sanitary logging is the cutting of dead (lost) trees and bushes and trees damaged (broken) by storm and snow, in order to ensure protection from calamities and diseases.

Supporting the natural regeneration includes all activities to facilitate the forest's natural regeneration, from seeds and shoots.

Game

The number of game species in Bulgaria is determined on an annual basis through game counts carried out both in the state hunting areas and in the hunting areas, managed by the local hunting companies. The game counts consist of estimating the number of game by species, sex, age and number, settled on a certain territory, suitable for game breeding. The process of game counts is carried out through questionnaires, filled out by the gamekeepers for the respective region. The Executive Forest Agency maintains a Register for the annual data on spring game counts at a national level.

XXII. AGRICULTURE

Utilized agricultural area and arable land

The data on crop area and the data on utilised agricultural area are obtained from the Survey on Land Use and Land Cover in Bulgaria, based on a territorial sample. The survey is conducted during the May-July period and is implemented throughout the entire territory of Bulgaria. The land cover and land use are observed at approximately 110 000 points grouped into 3 123 segments. The surveyors observe the same points and the same segments each year.

Agricultural crop production

Data on the main agricultural crops production is obtained through the survey on the yield of the main crops in 2024. The survey is carried out during the month of November through interviews with the farmers. The total production of vegetables includes production from open areas and greenhouses.

Livestock

Information on the number of livestock in Bulgaria is obtained by means of a special survey. Statistical data on the type, category and number of animals, milk production and its sales distribution, sales of animals for slaughter, slaughtered animals in farms and main information on the structure of livestock are collected. The questionnaire is filled out by means of interviews with livestock farmers.

The information on the number of poultry and egg production is collected by a special survey. All the big farms are observed exhaustively. The results are supplemented with information from a sample of small holdings raising poultry.

Economic accounts for agriculture

The Economic accounts for Agriculture (NSI data) are satellite accounts in the framework of National Accounts.

Output of agriculture represents all goods and services produced over the accounting period by all the units, irrespective of whether their agricultural activity is main or secondary, including households. Data refers to the final production, excluding internal turnover (goods and services produced and consumed for their own use during the accounting period). From 2007 onwards, the information includes both the financial support from the national budget and the EU budget

The main purpose of the elaboration of the economic accounts is the calculation of the entrepreneurial income characterizing the state and development tendencies of agriculture.

XXIII. ENVIRONMENT

Environmental statistics provide information on the state and changes in environmental conditions and the impact of human activities on it, as well as information on social actions and economic measures taken by society to avoid or mitigate these impacts and to restore and maintain the environment capacity.

Environmental accounts are a statistical system that combines economic and environmental information into a common framework for measuring the contribution of the environment to the economy and the impact of the economy on the environment. They organize environmental data from many areas using the same concepts and terminology as national accounts. In this sense, they are satellite accounts to national accounts, through which various aspects of the economy can be analyzed and evaluated.

Air emissions

Emission is the release of harmful substances (pollutants) into the air (air emission). Air emissions are a direct result of the economic activity in the country. The amount of the emitted harmful substances depends both on the quantities of consumed fuels and produced output, and the level of technology used.

Air emissions are calculated based on data from a specialized statistical survey of the National Statistical Institute (NSI) and information from the Executive Environmental Agency (ExEA) at the Ministry of Environment and Water (MOEW). Emissions are estimated using a calculation method based on the following parameters: fuels consumed, sulphur content, calorific value, quantity of produced output and input of raw materials, as well as emission factors applicable for the respective pollutants.

The most common characteristic of the relation economy - environment is contained in the indicator 'Emission per unit of Gross Domestic Product (GDP)'. Relative to output GDP, emissions characterize its resource intensity (energy intensity) and structure. High energy consumption per unit of GDP is accompanied by high emissions per unit of GDP and vice versa.

The following figure shows the trend of sulfur dioxide emissions and the trend of GDP (in dollars at current prices).

Figure 1. Emissions of Sulphur dioxide and GDP

¹ Because of rounding some totals exceed or are less than the sums of their components.² Emissions are calculated in accordance with the latest edition of EMEP/EEA Guidebook 2023 and IPCC Guidelines for National Greenhouse Gas Inventories.³ Data on emissions from road transport, agriculture and households are included.

Based on the data on calculated emissions, data from the National Emission Inventories and from other statistical surveys and administrative sources, the Air Emission Accounts are prepared and reported to Eurostat, in compliance with the residency principle, in accordance with the requirements of Regulation (EU) No 691/2011.

Water

Water statistics gives information for different parts of the water cycle in quantitative terms (water abstraction, water use, wastewater), water infrastructure, treatment plants for drinking water, and urban wastewater treatment plants (UWWTP). The scope of water statistics includes companies providing supply and sewage water services (PWS, operators of UWWTP and irrigation systems) and water users.

The data are based on annual statistical surveys: ‘Water supply, sewage and treatment’ and ‘Water supply through irrigation systems’ (exhaustive) and ‘Water use’ (business entities using over 36 thousand cubic meters of water/year and over 20 thousand cubic meters of water/year for irrigation of agricultural areas, livestock and industrial purposes (including cooling)). The water abstraction by households is not covered. The presented results are calculated on the basis of the reported statistical data, proportions and estimates. The methodology also uses principles from the Data Collection Manual for the OECD/Eurostat Joint Questionnaire ‘Inland water’.

The share of the population with wastewater collection and treatment services provides an overview of infrastructure development and environmental protection.

Water is key to normal human functioning. Figure 3 presents the amount of water (average per person per day) delivered from the public water supply to households. Water supplied by the public to other consumers, total water losses (including illegal use-theft of water) and water supplied for technological and fire-fighting purposes are not included.

Figure 3. Drinking water used by households from Public water supply, average per capita

Waste

Waste statistics cover waste from economic activity and household waste.

Waste from economic activity is the waste generated as a result of all economic activities in the country.

In 2023, the total amount of waste generated in Bulgaria was 94 238 564 tons. Over the years, the ratio between hazardous and non-hazardous waste has remained relatively constant, and in 2023 it was 17% and 83% of the total amount of waste generated in the country.

Municipal waste is the waste that results from the vital activity of people in homes, administrative, social and public buildings. The waste from commercial sites and accompanying craft activities, sites for recreation and entertainment, when it is not hazardous waste and at the same time its quantity or composition does not interfere with its treatment together with household waste, is equated to municipal waste. The information about the waste is provided through specialized statistical surveys of the NSI and administrative data from the Executive Agency for Environment, including estimation.

The share of the served population of the municipal waste collection system continues to increase, reaching 99.94% in 2023 (compared to 99.87% in 2021). The tendency to serve almost all settlements, except for some hard-to-reach settlements, is permanently preserved.

Figure 5. Share of population served by systems for organized waste collection

‘Generated municipal waste’ is a summary indicator that is calculated as the sum of the quantities of municipal waste: 1) collected through organized waste collection systems, 2) collected through other systems than those with organized waste collection (mostly recyclable materials, such as metal, paper, plastic and others, which are collected at specialized sites and subsequently sent directly for recycling), and 3) statistical assessment of the generated waste from the not covered population by organized waste collection systems. The quantity of generated municipal waste from 2020 to 2023 has a tendency to increase, and in 2023 it reaches 3 165 thousand tons.

4. Municipal waste¹

Landfill sites and installation for treatment of municipal waste - number	73	73	71	75

¹ There are no data available on the treated waste of Kyustendil municipality.

The rate of accumulation of municipal waste or generated municipal waste per capita is the ratio between the amount of generated municipal waste and the average number of the population for the year. It shows the pressure on the environment.

The amount of waste generated per capita each year in the period 2020 - 2023 increases to 491 kg average per capita in 2023.

Figure 6. Collected municipal waste per capita of served population

Environmental protection expenditure accounts

Statistics on environmental protection and restoration expenditures quantify the resources distributed to environmental protection by local economic units. They include all activities and actions whose main purpose is to prevent, reduce, and remove pollution and any other deterioration and loss of environmental quality. The environmental expenditures are carried out in the following directions: wastewater discharge and treatment, air protection, forests, soils, biodiversity, collection, treatment and disposal of waste and others.

The source of data on environmental protection and restoration expenditures is a statistical survey. The set of statistical surveys combines two approaches - comprehensive and sample observation.

The survey is comprehensive for statistical units previously known to have incurred environmental expenditure. The rest of the statistical population is covered by a random sample, representative at a national level by a group of economic activities according to the number of employees (over 10 employees). The random sample is processed and supplemented based on an assessment to ensure representation at a national level and quality.

The share of environmental expenditures from the gross domestic product (GDP) is the main measure for steps taken by society and the state to reduce environmental pressure. For example, in 2022, the share of environmental expenditure of GDP was 1.8%.

Figure 7. Expenditure of protection and restoration of environment (% of GDP)

5. Expenditure on protection and restoration of the environment

	2019	2020 ¹	2021	2022	2023 ²
Total - million BGN	2308	2471	2643	3030	.
On acquisition of tangible and intangible fixed assets - million BGN	455	658	704	731	.
On maintenance of tangible fixed assets - million BGN	1853	1813	1939	2298	.
Share of environmental expenditure in GDP - %	1.9	1.9	1.9	1.8	.

¹ Revised data.

² According to the National Statistical Program the data for 2023 will be published on the NSI website on 20th of December 2025.

Waste recovery and disposal has the largest share of the total environmental expenditures (59%), followed by the protection of air (16%) and wastewater treatment (15%). For other environmental domains - noise abatement, conservation of biodiversity, protected areas and sites and others, the share is 10%.

6. Expenditure on protection and restoration of the environment by use^{1,2}

Figure 8. Structure of expenditure on protection and restoration of the environment by ecological use in 2022

Tangible fixed assets with ecological use

Tangible fixed assets (TFA) with ecological use include facilities, installations and equipment necessary for the protection and restoration of the environment in areas (for wastewater, air, land, waste disposal, protection of biodiversity, noise protection), and monitoring and control equipment. They do not include equipment to protect the air purity and reduce noise and vibration in the workplace, i.e. labor protection activities. The statistics provide information on the availability and movement of tangible fixed assets for environmental purposes.

Data on tangible fixed assets with ecological use are collected through a comprehensive statistical survey. The methodology is in line with the latest requirements of Eurostat (EU Statistical Office) and the Organization for Economic Cooperation and Development. Data on available tangible fixed assets are published at book value and are part of the total tangible fixed assets in the country.

At the end of 2023, the total value of the TFA with ecological use amounted to 11 484 million BGN and is distributed by the main environmental domains as follows: for wastewater treatment (industrial and urban wastewater treatment plants, sewerage network, etc.) - 35%, followed by the facilities for air protection - 27% for waste treatment - 32% and others - 6%. There is no significant change in the relative share of assets distributed by environmental domains compared to previous years.

7. Tangible fixed assets with ecological use¹

Figure 9. Tangible fixed assets with ecological use as of 31.12.2023

Environmental goods and services

The environmental goods and services sector includes all economic operators carrying out activities leading to environmental protection and resource management (called producers of environmental goods and services). Environmental protection includes all activities and actions whose main purpose is to prevent, reduce and eliminate its pollution and deterioration. Resource management includes the conservation, maintenance and improvement of natural resources, and as a result, their prevention from depletion. Producers of environmental goods and services may or may not specialize in their production, may produce them as a result of primary or secondary activities, or may produce them for their own use.

Data on environmental goods and services are collected through a statistical survey.

The statistical survey is a combination of comprehensive and sample statistical survey. The methodology is in line with the requirements of the European institutions and Eurostat and is based on the Environmental goods and services sector accounts - Handbook 2016 edition. The environmental goods and services sector provides data on output, value added, exports and employment, according to the System of Environmental Economic Accounting 2012 - Central Framework (SEEA SF 2012) and Regulation (EU) No 691/2011 on European environmental economic accounts.

In 2022, the total value of the produced environmental goods and services for environmental protection and resource management amounted to 11 252 million BGN, which is 32.3% more compared to 2021 (8 505 million BGN).

Fig. 10. Output in the environment goods and services sector

Packages placed on the market

Package is all products made of material of any nature, used to place, store, transport, deliver and present goods - from raw materials to processed goods - from the manufacturer to the user or the consumer. Items that are 'non-returnable' and used for the same purposes are also considered packaging. Data on packages placed on the market, used for packaging of sold products, are collected through a statistical survey of economic entities that produce and import packaged goods; carry out packaging of goods for remuneration; package goods for own sale; produce disposable packaging and utensils.

The statistical survey is comprehensive. It is consistent with the need for a complete statistical estimation of the phenomenon.

Over the last 3 years, there has been a trend of decrease in plastic packaging (for the last reporting year 2023 - by about 4% compared to 2022). The largest increase in 2023 was observed in paper packaging - almost 4% compared to 2022.

Underground reserves

Underground reserves are the reserves and resources of underground natural resources, which are mineral deposits in the earth's interior or on the earth's surface with a certain geological study and economic interest. The reserves are the part of the mineral resources that are expected to be extracted for commercial purposes with a certain degree of security. The reserves of the underground natural resources are grouped in the following classification categories: (1) proven reserves - those for which with a high degree of certainty (90 and over 90%) the technical possibility for extraction and its economic profitability with the existing technology and the corresponding prices, and (2) probable reserves - those that have not yet been proven, but for which there is more than a 50% probability of a technically feasible and economically viable yield.

Data on underground reserves are obtained on the basis of a comprehensive statistical survey. It is consistent with the need for a complete statistical estimation of the phenomenon.

The area of underground reserves in 2023 increased by 22% compared to 2019.

Registered noise levels

Noise is one of the main factors with adverse effects on the population, present as unwanted or harmful external sound caused by human activity, including that emitted by road, rail and air transport, from industrial installations and facilities and from local sources. Noise levels are observed in legally defined terrains, distributed in and development zones in the urbanized territories and outside them. A special noise indicator is used for areas subject to aviation noise.

Noise level data are based on a comprehensive survey, covering all noise registration points in the country. The source of the data is the National Center for Public Health and Analysis. The statistical survey is comprehensive and is conducted in accordance with the National Environmental Noise Monitoring System. In 2024, 744 points for measuring the noise level were observed, distributed in 36 settlements, and in 506 points levels above the permissible norms were measured.

Protected natural scenery

‘Protected areas’ in Bulgaria is a generalized concept covering all parks, reserves, landmarks and protected areas. They are designed to protect the biological diversity of ecosystems and the natural processes taking place in them, as well as characteristic or remarkable objects of inanimate nature. Data on the number and area of protected areas and sites by species (reserves, natural landmarks, protected areas, national parks, nature parks and maintained reserves), as well as the number of protected plants, animals and centuries-old trees are provided by statistical survey with administrative data from the Ministry of Environment and Water. The scope of the study includes all protected areas and sites in the country. The statistical survey is comprehensive and is conducted in accordance with the Protected Areas Act and the Biodiversity Act.

In 2024, 10 protected areas and 3 natural landmarks with a total area of 1 934 hectares were newly declared.

Figure 14. Area of protected natural scenery

The share of protected areas and sites for the country remains at 5.3% for 2024.

Figure 15. Share of protected areas in the total country's territory

² Because of rounding some totals do not exceed or are less than the sums of their components.

³ The inclusion and exclusion of the area in 2024 is a result of procedures carried out under Art. 42, para. 6 of the Protected areas law for updating the areas of protected areas, and is not a result of procedures for declaring new protected areas of the respective category or procedures for changing the areas of existing ones.

13. Protected natural areas¹

Year	Area - ha	Share of protected areas as % to the total country's territory
2019	584922	5.3
2020	583582	5.3
2021	583626	5.3
2022	584836	5.3
2023	585500	5.3
2024	584372	5.3

XXIV. RESEARCH AND DEVELOPMENT ACTIVITY AND INNOVATION ACTIVITY

Research and development activity (R&D)

Research and development activity (R&D) comprises creative and systematic work undertaken in order to increase the stock of knowledge - including knowledge of humankind, culture and society - and to devise new applications of available knowledge. R&D activity covers basic research, applied research and experimental development.

Gross domestic expenditure on R&D (GERD) comprises current costs and capital expenditure.

R&D expenditure as a percentage of GDP is an internationally comparable measure of the intensity of R&D.

R&D personnel comprise two categories - researchers and other R&D personnel. The personnel employed on R&D is measured both in full-time equivalent (FTE) on R&D and in headcounts. Personnel in FTE are calculated on the basis of working time spent on R&D activity during the reference year.

GERD and R&D personnel are distributed in four institutional sectors: business enterprises sector, government sector, higher education sector and private non-profit sector.

Figure 1. Structure of gross domestic expenditure on R&D (GERD) by institutional sectors in 2023

1. Gross domestic expenditure on research and development activity (GERD) by type of costs

	2020	2021	2022	2023
GERD - thousand BGN	1023790	1074004	1265635	1467491
Current costs	922112	996144	1179619	1332309
Capital expenditure	101678	77860	86016	135182
R&D expenditure as a percentage of GDP - %	0.85	0.77	0.75	0.79

2. Personnel engaged in research and development activity (R&D) by category

Categories	2020	2021	2022	2023
	Headcount			
Total	35087	34613	37056	35179
Researchers	23228	23234	24350	23489
Other R&D personnel	11859	11379	12706	11690
	Full-time equivalent			
Total	26085	25122	27090	25410
Researchers	16691	16230	17487	16356
Other R&D personnel	9394	8892	9603	9054

Innovation activity

An innovation is a new or improved product (good or service) or business process that differs significantly from the enterprise's previous products or business processes and that has been implemented on the market or brought into use by the enterprise.

An innovation-active enterprise is an enterprise, which during the observation period is engaged in one or more activities to develop or implement new or improved products or business processes.

A product innovation is a new or improved good or service that differs significantly from the enterprise's previous goods or services and that has been implemented on the market. It includes significant changes to the design of the goods. Simple re-sale of new goods and changes of a solely aesthetic nature are excluded.

A business process innovation is a new or improved business process for one or more business functions that differs significantly from the enterprise's previous business processes and that has been implemented within the firm.

3. Innovation-active enterprises as a share of all enterprises in 2022¹

(Per cent)

Economic sectors	
Total	26.1
Industry	32.9
Mining and quarrying	18.9
Manufacturing	33.8
Electricity, gas, steam and air conditioning supply	18.5
Water supply; sewerage, waste management and remediation activities	20.5
Services	19.6
Wholesale trade, except of motor vehicles and motorcycles	16.6
Transportation and storage	8.4
Information and communication	40.9
Financial and insurance activities	20.6
Architectural and engineering activities; technical testing and analysis	15.1
Scientific research and development	100.0
Advertising and market research	21.7

4. Enterprises that have new or significantly improved products new to the market as a share of all enterprises in 2022¹

(Per cent)

Economic sectors	
Total	7.4
Industry	9.5
Mining and quarrying	0.9
Manufacturing	10.0
Electricity, gas, steam and air conditioning supply	1.6
Water supply; sewerage, waste management and remediation activities	3.1
Services	5.4
Wholesale trade, except of motor vehicles and motorcycles	4.0
Transportation and storage	0.6
Information and communication	14.7
Financial and insurance activities	5.8
Architectural and engineering activities; technical testing and analysis	4.2
Scientific research and development	37.7
Advertising and market research	5.6

¹The data refer to enterprises with 10 or more persons employed and cover economic activities pointed in table.
