

## GROSS DOMESTIC PRODUCT FOR THE THIRD QUARTER OF 2022 (FLASH ESTIMATES)

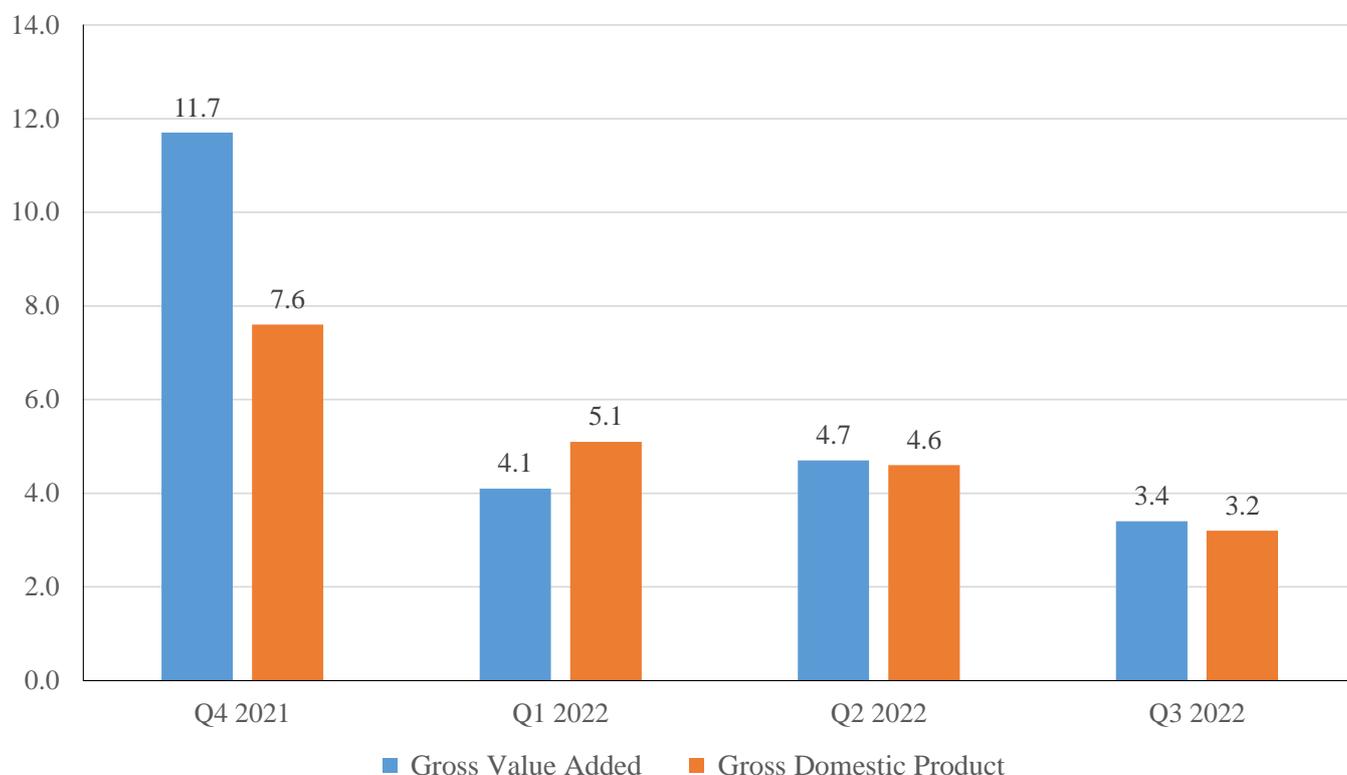

In the third quarter of 2022 the gross domestic product (GDP) increased by 3.2% compared with the third quarter of the previous year and by 0.6% compared with the second quarter of 2022, according to seasonally adjusted data.

### Growth rates on annual basis

In the third quarter of 2022, according to seasonally adjusted data, GDP increased by 3.2% compared to the third quarter of the previous year. Gross value added increased by 3.4%.

Final consumption registered an increase of 3.0%, while gross fixed capital formation decreased by 8.4% in the third quarter of 2022 compared to the third quarter of the previous year at seasonally adjusted data. Exports of goods and services increased by 7.8% and imports of goods and services increased by 5.3%.

**Figure 1. Growth rate compared to the third quarter of the previous year, percentages**

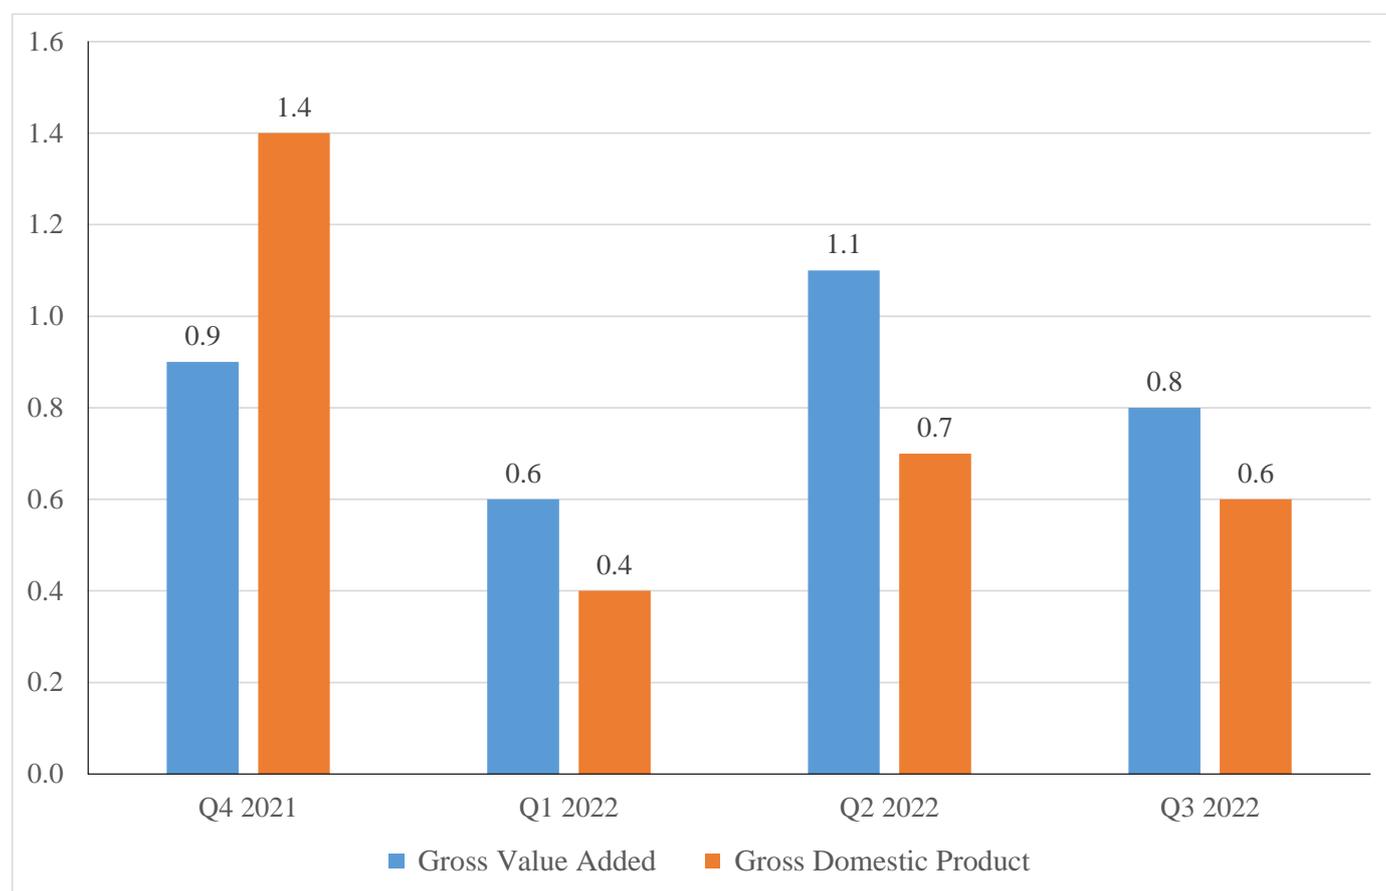

### Quarter on quarter growth rates

According to the seasonally adjusted data, GDP has a growth of 0.6% in the third quarter of 2022 compared to the previous quarter (Annex, Table 1). GVA increase in the third quarter of 2022 is 0.8%.

According to the flash estimate of GDP by final expenditure approach, reason for the positive GDP growth at seasonally adjusted data in the third quarter of 2022 compared to the previous quarter is the increase in the final consumption by 0.5%.

**Figure 2. Growth rate compared to the previous quarter, percentages**

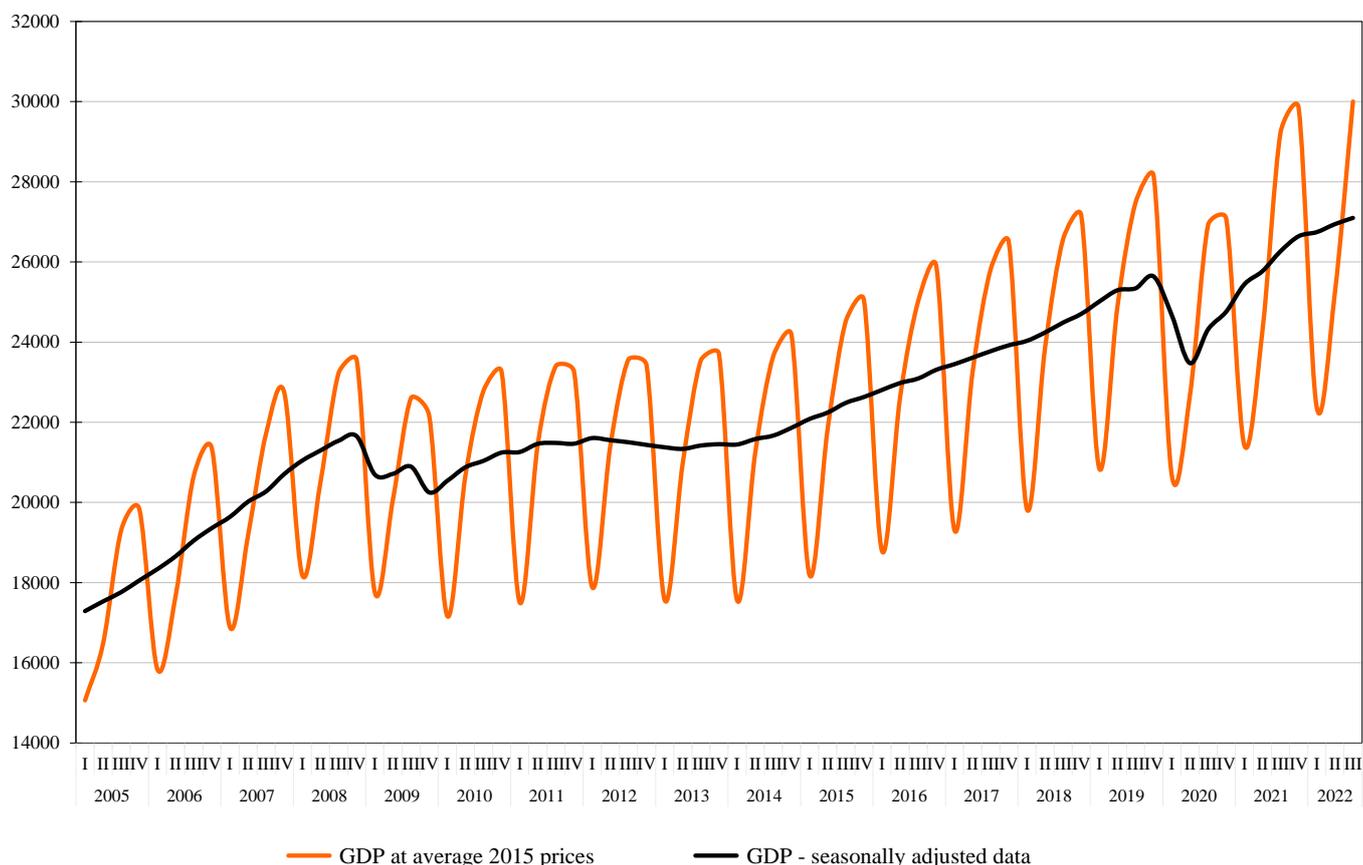

### GDP in monetary terms, current prices

According to the flash GDP estimates for the third quarter of 2022, GDP at current prices is 44 539.0 million BGN (Annex, Table 2).

Gross Value Added in the third quarter of 2022 amounted to 39 336.8 million BGN.

In the structure of GDP by the expenditure approach the largest share of 75.6% has the final consumption, which in nominal terms is 33 668.2 million BGN. In the third quarter of 2022 gross capital formation is 9 780.9 million BGN and has a share of 22.0% in GDP. The external balance (exports minus imports) is positive.

## Methodological notes

The Eurostat Handbook on quarterly National Accounts defines the flash estimates as:

*'...the earliest picture of the economy according to national accounts concepts, which is produced and published as soon as possible after the end of the quarter, using a more incomplete set of information than that used for traditional quarterly accounts...'*

Flash estimates of GDP, in the context of general conditions for the preparation of short-term indicators, are based on preliminary short-term information (subject to subsequent update and revisions), expert assessments and models for the components of GDP structure, for which direct basic information at the time of calculation is not available.

Flash estimates of GDP for the third quarter of 2022 were prepared 47 days after the reference period. They are presented in a standard format for publication of quarterly national accounts data - growth rates as compared to the previous quarter and compared to the same period of the previous year, current prices and relative shares of the components in the GDP.

According to the Release Calendar, NSI will prepare and publish preliminary quarterly estimates of GDP for the third quarter of 2022 on December 7<sup>th</sup>, 2022.

Seasonal adjustment of statistical indicators in the NSI is organized in accordance with ESS Guidelines on Seasonal Adjustment. The seasonal adjustment of GDP data is made with the TRAMO/SEATS algorithm applied. The set of variables for seasonal adjustment covers gross value added, gross domestic product and its components from the expenditure side. A direct seasonal adjustment method is applied, where indicators and their components are adjusted independently.
