

GROSS DOMESTIC PRODUCT FOR THE FOURTH QUARTER OF 2018 (FLASH ESTIMATES)

Gross Domestic Product (GDP) expanded with 3.1% in the fourth quarter of 2018 compared to the same quarter of the previous year and with 0.7% compared to the third quarter of 2018 according to the seasonally adjusted data.

The Eurostat Handbook on quarterly National Accounts defines the flash estimates as:

„...the earliest picture of the economy according to national accounts concepts, which is produced and published as soon as possible after the end of the quarter, using a more incomplete set of information than that used for traditional quarterly accounts...”

Flash estimates for GDP in the context of general conditions for the preparation of short-term indicators are based on preliminary short-term information (subject to subsequent update and revisions) expert assessments and models for the components of GDP structure, for which direct basic information at the time of calculation is not available.

Flash estimates of GDP for the fourth quarter of 2018 were prepared within 45 days after the reference period. They are presented in a standard format for publication of quarterly national accounts data - current prices, relative shares of the components in the GDP structure and growth rates as compared to the previous quarter and compared to the same period of the previous year.

According to the Release Calendar, the NSI will prepare and publish preliminary quarterly estimates of GDP for the fourth quarter of 2018 on March 7th 2019.

GDP in monetary terms, current prices

According to the flash GDP estimates for the fourth quarter of 2018, the GDP at current prices amounted to 29 881 million BGN (Annex, Table 1).

Gross Value Added in the fourth quarter of 2018 amounted to 25 905 million BGN.

In the structure of GDP by the expenditure approach the largest share has the final consumption (81.3%), which in nominal terms amounted to 24 288 million BGN. In the fourth quarter of 2018 gross capital formation is 6 292 million BGN and has a share of 21.0% in GDP. The external balance (exports minus imports) has a negative sign.

Quarter-on-quarter growth rates

According to the seasonally adjusted data¹, the GDP growth rate in the fourth quarter of 2018 is 0.7% compared to the previous quarter (Annex, Table 2). GVA increase in the fourth quarter of 2018 is 0.8%.

According to the flash estimates by final expenditure, the GDP growth at seasonally adjusted data in the fourth quarter of 2018 compared to the third quarter of 2018 is determined by increase of the export of goods and services - with 2.4%, gross fixed capital formation - with 0.3% and final consumption - with 0.2%.

¹ Seasonal adjustment of statistical indicators in the NSI is organized in accordance with [ESS Guidelines on Seasonal Adjustment](#). The seasonal adjustment of GDP data is made with the TRAMO/SEATS algorithm applied. The set of variables for seasonal adjustment covers gross value added, gross domestic product and its components from the expenditure side.

Growth rates on annual basis

The fourth quarter of 2018 GDP at seasonally adjusted data increased by 3.1% compared to the same quarter of the previous year. Gross value added increased by 2.9%.

As regards the expenditure components of GDP, the final consumption registered a positive economic growth of 5.3%. Gross fixed capital formation increased by 4.0% in the fourth quarter of 2018 compared to the same quarter of the previous year at seasonally adjusted data. Imports of goods and services increased by 2.5%, and exports of goods and services - by 0.8%.
