

## INFLATION AND CONSUMER PRICE INDICES IN SEPTEMBER 2020

### Consumer price index (CPI)

The **consumer price index** in September 2020 compared to August 2020 was 99.4%, i.e. the monthly inflation was -0.6%. The inflation rate since the beginning of the year (September 2020 compared to December 2019) has been -1.1% and the annual inflation in September 2020 compared to September 2019 was 0.9% (Figure 1 and Annex, Table 1).

The annual average inflation, measured by CPI, in the last 12 months (October 2019 - September 2020) compared to the previous 12 months (October 2018 - September 2019) was 2.3%.

**Figure 1. Inflation measured by CPI by months**

In September 2020 compared to the previous month the prices of goods and services in the main consumer groups changed as follows:

- Food and non-alcoholic beverages - an increase of 0.4%;
- Alcoholic beverages and tobacco - the prices remained at the level of the previous month;
- Clothing and footwear - a decrease of 0.9%;
- Housing, water, electricity, gas and other fuels - an increase of 0.3%;
- Furnishings, household equipment and routine maintenance of the house - a decrease of 0.2%;
- Health - the prices remained at the level of the previous month;

www.nsi.bg

- Transport - a decrease of 1.1%;
- Communications - an increase of 0.2%;
- Recreation and culture - a decrease of 8.9%;
- Education - an increase of 3.1%;
- Restaurants and hotels - a decrease of 1.9%;
- Miscellaneous goods and service - a decrease of 0.6%.

### Harmonized index of consumer prices (HICP)

The **harmonized index of consumer prices** in September 2020 compared to August 2020 was 98.8%, i.e. the monthly inflation was -1.2%. The inflation rate since the beginning of the year (September 2020 compared to December 2019) has been -0.7% and the annual inflation in September 2020 compared to September 2019 was 0.6% (Annex, Table 2).

The annual average inflation, measured by HICP, in the last 12 months (October 2019 - September 2020) compared to the previous 12 months (October 2018 - September 2019) was 1.7%.

In terms of HICP, in September 2020 compared to the previous month the prices of goods and services in the main consumer groups changed as follows:

- Food and non-alcoholic beverages - an increase of 0.4%;
- Alcoholic beverages and tobacco - the prices remained at the level of the previous month;
- Clothing and footwear - a decrease of 0.6%;
- Housing, water, electricity, gas and other fuels - an increase of 0.3%;
- Furnishings, household equipment and routine maintenance of the house - the prices remained at the level of the previous month;
- Health - the prices remained at the level of the previous month;
- Transport - a decrease of 2.4%;
- Communications - an increase of 0.2%;
- Recreation and culture - a decrease of 3.2%;
- Education - an increase of 3.0%;
- Restaurants and hotels - a decrease of 8.6%;
- Miscellaneous goods and service - a decrease of 0.1%.

### Price index of a small basket (PISB)

The **price index of a small basket** in September 2020 compared to August 2020 was 100.1% and the overall increase since the beginning of the year (September 2020 compared to December 2019) has been 101.3% (Annex, Table 3).

In September 2020 compared to the previous month the prices of goods and services in the small basket for the 20% households with the lowest income changed as follows:

- Food products - an increase of 0.3%;
- Non-food products - a decrease of 0.1%;
- Services - the prices remained at the level of the previous month.

## Methodological notes

The **consumer price index (CPI)** is the official measure of inflation in the Republic of Bulgaria. It measures the total relative price change of goods and services used by households for private (non-production) consumption and is calculated by applying the structure of the final monetary consumption expenditures of Bulgarian households. The main source of information for the expenditures is the household budget survey in the country. CPI in year  $t$  is calculated with the expenditures structure of year  $t-1$ .

The **Harmonized Index of Consumer Prices (HICP)** is the comparable measure of inflation across EU Member states. It is one of the criteria of price stability and readiness of Bulgaria to join the euro-zone. HICP, as well as CPI, measure the total relative price change of goods and services. Both indices are calculated using the same basket of goods and services, but differ with respect to the weights used. HICP is calculated through the use of weights, which reflect the individual and the collective consumption of all households (incl. institutional and foreign households) on the economic territory of the country. The main source of information for HICP weights is the national accounts data. HICP in year  $t$  is calculated with the weights of year  $t-2$ .

In compliance with Regulation (EC) No 2015/2010 since January 2016 the base year for HICP has been changed and the all indices have been calculated and published at 2015 as a base year. The time series have been recalculated according to the new base year and have been posted on the NSI website (www.nsi.bg).

The **Price Index of a Small Basket (PISB)** is a measurement of the relative average price changes of 100 socially useful and vital for living goods and services. The weights of this index reflect the expenditures of the 20% lowest household's incomes. The source of weights information is the Households Budget Survey in the country. This index in year  $t$  is calculated with the weights of year  $t-1$ .

The **chain** consumer price indices measure the price change in the current month compared to the previous month. The chain consumer price indices are used as a measure of **monthly inflation**.

The **12-month** consumer price indices measure the price changes occurring between the current month and the same month of the previous year. The 12-months consumer price indices are used as a measure of **annual inflation**.

Consumer price indices **over December of the previous year** measure the accumulated changes in prices of the current month with respect to December of the previous year. Consumer price indices over December of the previous year are used as measures of the **inflation since the beginning of the year**. In December of each year, the 12-months index is equal to the index over December of the previous year.

The **annual average** consumer price indices measure the average price change during the 12 months of the current year compared to the average price change during the 12 months of the previous year. The annual average consumer price indices are used as a measure of the **annual average inflation**.

## Consumer price indices in the context of the COVID-19 crisis

The National CPI, HICP and the PISB for September 2020 have been produced according to Eurostat's methodological guidance on the compilation of the HICP in the context of the COVID-19 crisis, following the following principles:

- fixed statistical weights used in the calculation of the indices;
- production of all indices according to the ECOICOP classification (European Classification Of Individual Consumption by Purpose);
- minimizing the number of imputed prices and sub-indices where possible;
- estimation of missing price observations by applying imputation methods.

The percentage of missing price observations for September 2020 is 2%, distributed according to ECOICOP main headings as follows:

(Per cent)	
Commodity groups	Missing price observations
<b>00 Total CPI</b>	2
01 Food and non-alcoholic beverages	2
02 Alcoholic beverages and tobacco	1
03 Clothing and footwear	4
04 Housing, water, electricity, gas and other fuels	2
05 Furnishings, household equipment and routine household maintenance	2
06 Health	4
07 Transport	2
08 Communication	2
09 Recreation and culture	3
10 Education	1
11 Restaurants and hotels	1
12 Miscellaneous goods and service	1

The missing price observation's estimation has been carried out by using the imputation methods recommended by Eurostat and agreed with the Member States:

- with the nearest aggregate index (sub-index) in the hierarchical structure of the index (at a product level based on available prices for the same product) - for missing price observations of products that were available on the market;
- adjusting the price from the previous month with a seasonal factor (carry forward with a seasonal correction factor) - for seasonal products that were not available on the market (passenger air transport);
- carry forward the last observed prices - for some products (e.g. cultural services), where there were reasons to expect that their prices would be the same once the situation would revert back to normal.
